

Supplementary Figure S3. Specificity confirmation for the immunostaining of OLFM4 and SLC12A2. Control organoids were stained by antibodies specific for OLFM4 or SLC12A2, or by their corresponding non-immunized control IgG. Positive signals are shown as green signals of the fluorescein-labeled tyramid. Note that positive signals of OLFM4 are observed in the lumens of the organoids, in addition to the epithelial cells of the budding region.
