

Figure 8A

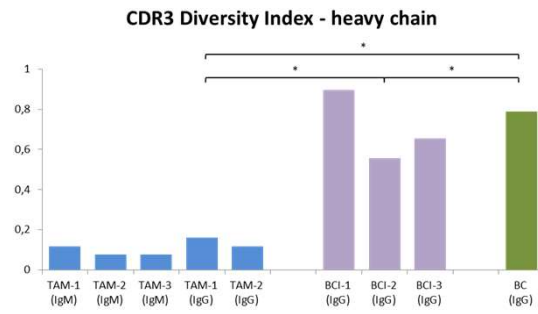

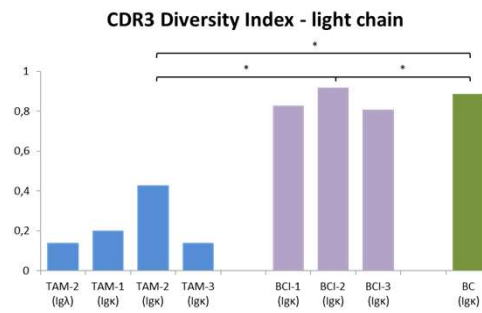

Figure 8B

**CDR3 Diversity Index for immunoglobulin heavy (A) and light (B) chains.** CDR3 heavy (A) and light chain (B) repertoire diversity indices for immunoglobulins expressed by TAM obtained from three distinct cancer patients (TAM-1, TAM-2, TAM-3). Note that TAM express markedly less diverse repertoires relative to B cells from patients with inflammatory diseases (BCI-1, BCI-2, BCI-3) and normal B cells (BC). The diversity index indicates the ratio of distinct clonotypes to the total number of sequenced clones. \*= $p < 0.05$ .
