

Supplementary Figure 4

Supplementary Figure 4. UHRF1 is associated with mono- and poly-ubiquitinated ROR1. HEK293 cells were transfected with HA-tagged ubiquitin, V5-tagged ROR1, or wild-type UHRF1 (1 μ g or 2.5 μ g). 48 hours post-transfection, lysates were harvested and enriched with a V5 antibody. Immunoprecipitates were evaluated for ubiquitinated-ROR1 by immunoblot. Note that ROR1 is poly- and mono-ubiquitinated.
