(a)

**Suppl Fig. 1. Determining mean velocities of CSF flow in CCJ and cerebral aqueduct regions (ID13).**

For (a) the CCJ and (b) the cerebral aqueduct, the black solid line indicates mean velocity and grey lines the pixel velocities. The black dashed line indicates the mean velocity (bias) of reference ROI pixels and the colored lines pixel velocities in reference ROI (noise). Note that for CCJ only 17 pixels out of 484 pixels were included for illustrative purpose only.

(b)

Suppl Fig. 2. Mean and standard deviation of CSF flow velocities in CCJ and aqueduct of iNPH patients (IDs 3, 6, and 13). The mean velocities (black line) with standard deviations (pink background) are shown for CCJ (a, c, e) and cerebral aqueduct (b, d, f) of three iNPH individuals (IDs 3 a-b, 6 c-d, and 13 e-f) to illustrate variability between cases.

Suppl Table 1. Demographic information of individual iNPH patients and healthy subjects

^aDirection of net flow: C=Cranially directed; S=Spinally directed. ROI (cm²): Size of region of interest in cm². ROI (pix): Size of region of interest in number of pixels. SNR (pix-by-pix): Signal to noise ratio calculated pixel by pixel. dP (mmHg/cm): Pressure gradient calculated from PC-MRI measurements. Net vol/cycle (ml): Bias corrected net volume of CSF during one cardiac cycle. Tot vol/cycle (ml): Bias corrected total volume of CSF during one cardiac cycle. Net vol/day (l): Sum of net vol/cycle during 24 hours. Max velocity (cranial, cm/s): Peak velocity in cranial direction extracted from mean velocities. Min velocity (caudal, cm/s): Peak velocity in caudal direction extracted from mean velocities.
