

Supplementary Figure 1

Supplementary Figure 1. Superoxide dismutase partly inhibits WST-8 reduction. (A, B) HEK293 (A) and HeLa (B) cells were treated as indicated (SOD: bovine SOD1). WST-8 was added and incubated at 37°C for 1 hour. Absorbance of WST-8 formazan was recorded. Data of three independent replicates are presented as the mean \pm s.e.m., n=3.
