

Supplementary Table 1: Differential diagnosis of Papilloedema [19];

Pseudopapilloedema	Congenitally anomalous discs	Small nerves that lack a physiological cup.
	Optic nerve head drusen	Globular hyaline bodies, which may be calcified.
	Hypermetropic discs	May appear crowded and elevated
	Myopic discs	Often elevated nasally and can show leakage in fundus angiography
	Myelinated nerve fibres	
Bilateral disc swelling	Infective	e.g. Lyme disease, cat scratch disease, and syphilis.
	Inflammatory	e.g. Optic neuritis; Uveitis; Scleritis
	Hypertensive crisis	
	Toxic	e.g. antimicrobials, immunomodulators, chemotherapeutic agents
	Metabolic	Diabetes
	Hereditary and mitochondrial disorders	e.g. Lebers Hereditary Optic Neuropathy
	Compressive	Tumours of the optic nerve (sheath meningioma or glioma); Thyroid eye disease
Unilateral disc swelling that uncommonly occurs bilaterally	Vascular	Non-arteritis anterior ischaemic optic neuropathy; Arteritic anterior ischaemic optic neuropathy; Central retinal vein occlusions
