

Supplementary Figure 2. ROD1 is highly expressed in B cells. **(a)** ROD1 expression in lysates extracted from diverse mouse tissues. GAPDH served as a loading control. **(b)** Flow cytometric analysis of ROD1 expression in isolated lymphoid cells, dendritic cells and neutrophils from spleen. MFI: mean fluorescence intensity. **(c)** Immunofluorescence staining of ROD1, B220 and CD3 in splenic sections. ROD1 is in green, B220 in red, CD3 in purple and DAPI in blue. Scale bar: 50 μ m.
