

Figure S3

Figure S3. Protein deprivation does not change the effect of dietary amino acids to promote food consumption.

Volume of food consumed by *Canton-S* flies that were raised in the absence of yeast extract (“Protein deprived”) or in the presence of 5% yeast extract (“Protein supplied”) (n=22-59). Virgin females were used for all experiments shown in this figure. Data are shown as means (\pm SEM). NS, $P > 0.05$; * $P < 0.05$; ** $P < 0.01$; *** $P < 0.001$; **** $P < 0.0001$.
