

Figure S5

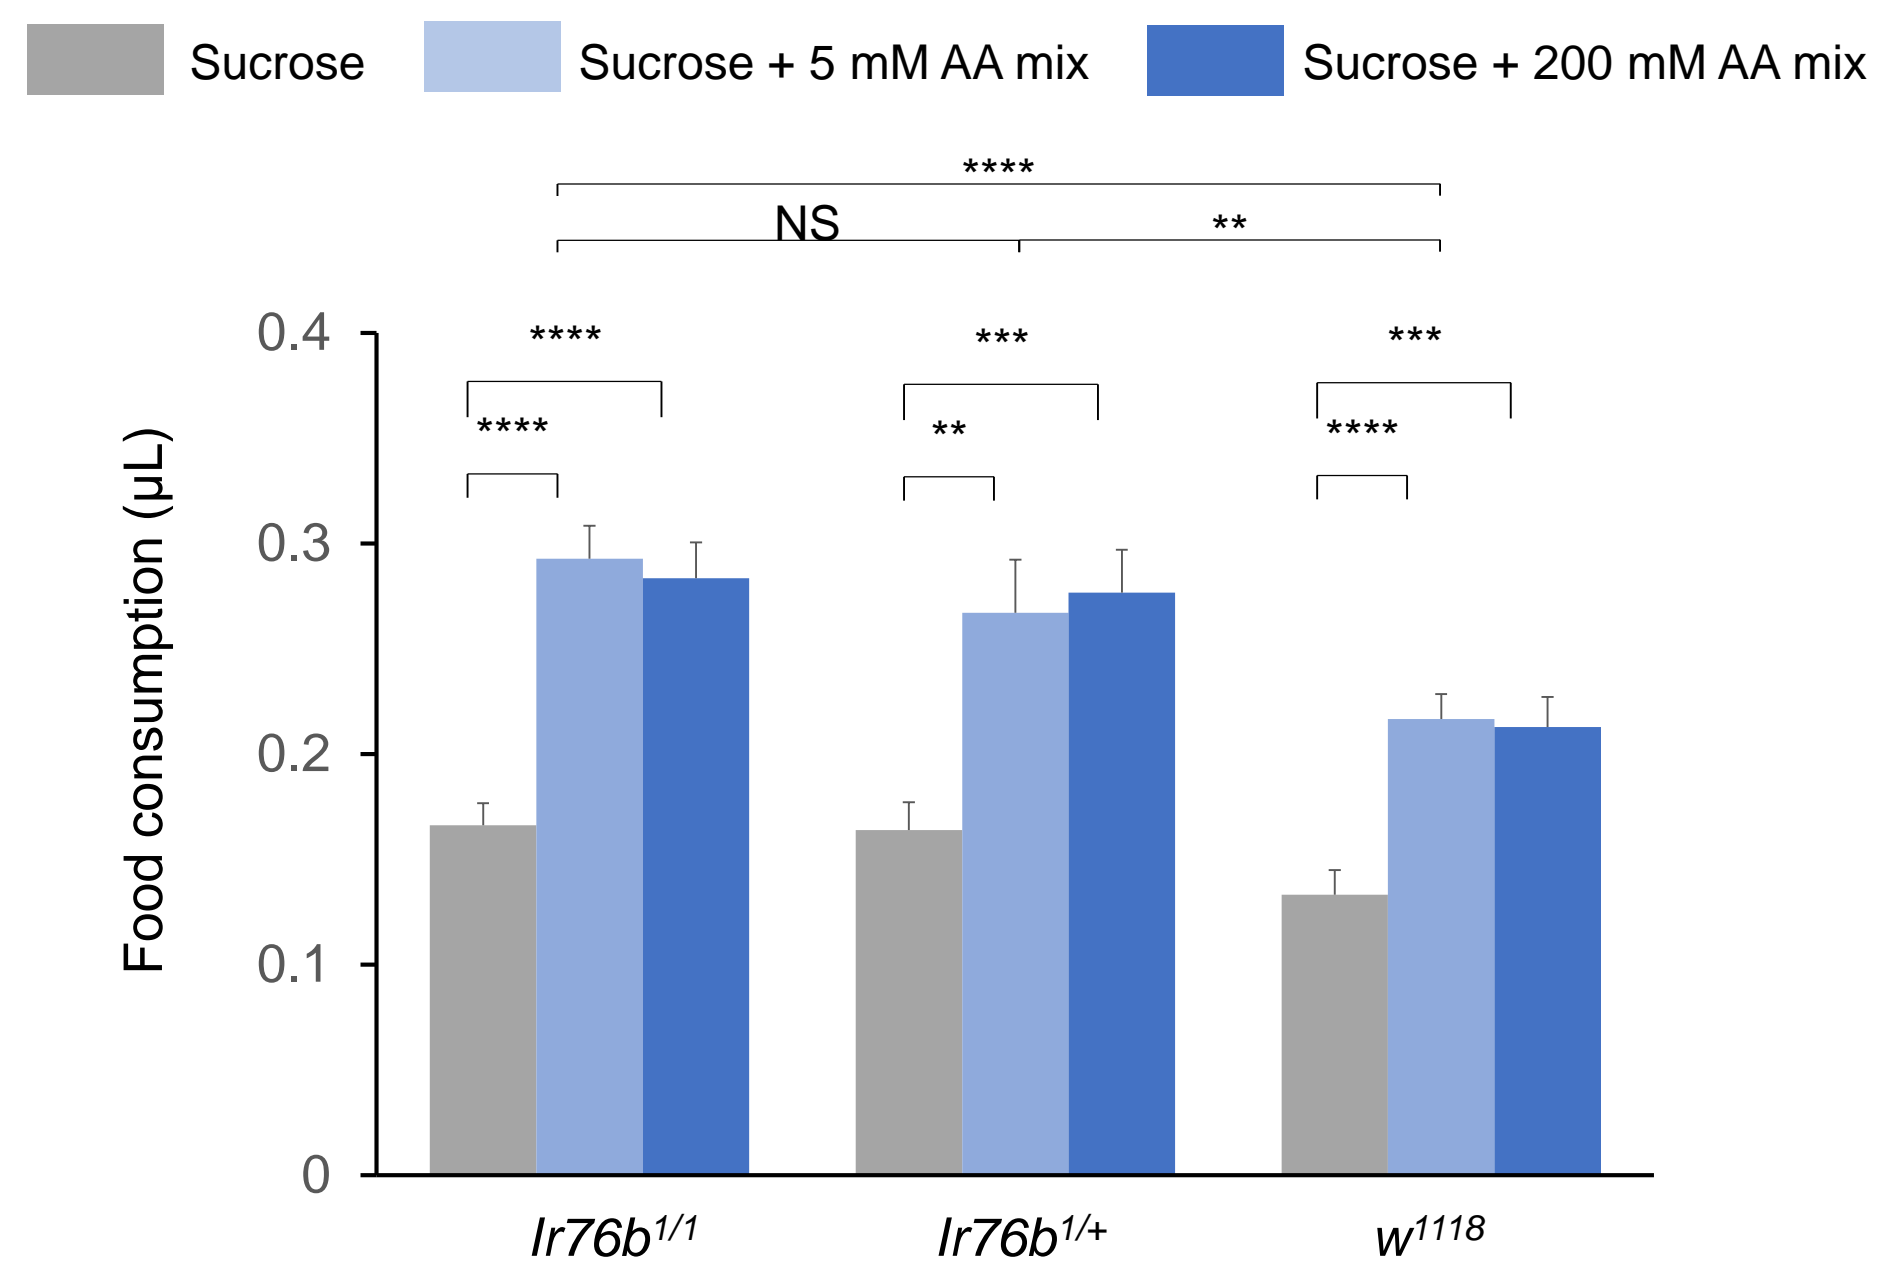

Figure S5. Ir76b is not required for dietary amino acids to promote food consumption

Volume of 400 mM sucrose (grey) or 400 mM sucrose plus different concentrations of amino acid mixture (blue) consumed by indicated genotypes (n=20-28). Virgin females were used for all experiments shown in this figure. Data are shown as means (\pm SEM). NS, $P > 0.05$; * $P < 0.05$; ** $P < 0.01$; *** $P < 0.001$; **** $P < 0.0001$.
