Bat rabies in Washington State: trends and risk factors for infection (2000–2017) Jesse Bonwitt, Hanna Oltean, Misty Lang, Rochelle M. Kelly, Marcia Goldoft

Table S3. Bats with positive RABV test results by cluster, Washington State— 2006–2017. A space-time cluster was defined as  $\geq$ 4 RABV positive bats originating from proximal counties during contiguous months.

Year	Month	Date	Species	Cluster Size	County
2008	June	6/4/2008	E. fuscus	4	Pierce
	July	7/9/2008			King
	July	7/18/2008			Thurston
	August	8/5/2008			Snohomish
2009	July	7/14/2009	E. fuscus	4	King
	August	8/4/2009			Pierce
	September	9/3/2009			Thurston
	October	10/7/2009			Kittitas
2014	August	8/15/2014	M. evotis	4	Clallam
	August	8/7/2014			Skagit
	September	9/18/2014			Kitsap
	October	10/3/2014			Kitsap
2015	June	6/22/2015	E. fuscus	5	Thurston
	July	7/27/2015			King
	August	8/5/2015			Mason
	September	9/21/2015			King
	September	9/25/2015			Snohomish
2016	July	7/22/2016	E. fuscus	4	Mason
	August	8/22/2016			Lewis
	September	9/20/2016			Pierce
	September	9/30/2016			Thurston
2017	May	5/16/2017	E. fuscus	11	Snohomish
	June	6/6/2017			Pierce
	July	7/26/2017			Snohomish
	July	7/21/2017			King
	August	8/31/2017			King
	August	8/30/2017			King
	August	8/24/2017			King
	August	8/18/2017			King
	August	8/29/2017			Lewis
	August	8/25/2017			Pierce
	September	9/6/2017			King
