

Supplementary figure legends:

Fig. S1. The effect of miR-766-3p up-regulation on Wnt3a mRNA expression in SK-HEP-1 cells. SK-HEP-1 cells were transfected with the miR-766-3p expression plasmid (miR-766-3p) or non-targeting miRNA precursor plasmid (NC). RT-PCR was used to determine HOXA13, Wnt3a, TSG101 and IGFBP2 mRNA expression. The experiments were repeated independently three times. **, $P < 0.01$.
