

S1 Fig. Distribution of summary cognitive score measures in 2000, 2003, 2006, 2007, and 2011

The general cognitive score is a sum of ten items as shown in Table 1. Histograms of the summary cognitive score in each year are shown in S1 Figure, with a normal curve superimposed for reference. A sensitivity analysis that used robust standard errors reached the same conclusions as our original model (results not shown).
