Supplementary Figure S2: Targeted KDM1A inhibition and EWS/FLI knockdown induces similar transcriptional signatures

(A) IPA of canonical pathways for genes commonly repressed and activated following KDM1A knockdown in A673 cells (>2 Log₂ fold change from iLuc scramble control). Venn diagram representations of the overlap between transcriptional profiles of (B) EWS/FLI and KDM1A knockdown or (D) KDM1A knockdown and SP-2509 treatment in A673 cells, generated through RNA-seq. Chi-square determined *P*-values are indicated with the observed contingency tables shown. IPA analysis of canonical pathways for genes commonly repressed and activated following (C) EWS/FLI and KDM1A knockdown or (E) KDM1A knockdown and SP-2509 treatment. (F) GSEA from RNA-seq experiments comparing SP-2509 treatment (rank-ordered dataset) and KDM1A knockdown in A673 cells. Normalized enrichment scores (NES) and *P* values are shown.
