Notes. *$p \leq$ .05; **$p \leq$ .01; ***$p \leq$ .001.
An odds ratio of 1.00 indicates the reference group.
The 'Complete Data' category includes those who had responses for the public safety personnel variable, the sociodemographic variables, and one or more child maltreatment variables. The 'Incomplete Data' category includes all those who had a response on the public safety personnel type variable and the sociodemographic variables; but did not provide a response to any of the child maltreatment variables and therefore were not included in the final sample.

Totals for each sociodemographic variable will not equal 8,520 due to missing data on each variable (i.e., responses on public safety personnel type and/or child maltreatment variables, but missing data on the specific sociodemographic variable).
