

S3 Fig. Null allele *hm1-2* identified in B73-EMS M₂ population. (A) Ethyl methanesulfonate (EMS) mutagenesis caused a G to A substitution at the junction of exon3/intron3. (B) Predicted protein sequence of *hm1-2* is 176 amino acids similar to HM1^{B73} and the mutation in the intron is predicted to generate 26 different amino acids before resulting in a truncated protein.

A
