Ecology and Evolution

### **Evolutionary history of the endemic water shrew *Neomys anomalus*: recurrent phylogeographic patterns in semi-aquatic mammals of the Iberian Peninsula**

Marina Querejeta and Jose Castresana

**Table S1.** Samples used in this study with information about location, river basin, collection year, mitochondrial phylogroup, sample type and genes sequenced in each sample. Samples of a previous study (Igea et al. 2015) are also included.

**Table S2.** Mitochondrial genetic diversity statistics of the cytochrome *b* (Cytb) and D-loop fragments of *Neomys anomalus* calculated for all the samples and for the four main mitochondrial phylogroups (A and B). N = number of sequences; S = number of segregating sites; h = number of haplotypes; Hd = haplotype diversity;  $\pi$  = nucleotide diversity per site;  $\emptyset$  = Watterson's estimator of nucleotide diversity per site.
