**Figure S1.** OMV association with THP-1 cells. R18-OMVs were incubated with THP-1 cells for 0 h (A), 1 h (B), 2 h (C), or 5 h (D) and imaged by confocal microscopy. At the initial time points (0 h and 1 h), very little cell-associated fluorescence is observed. R18-OMVs can be seen to be associated with the cell membrane at the 2 h time point. After a 5 h incubation, the fluorescence is observed throughout the cells. Scale bar = 100  $\mu\text{m}$ .
