

The figure consists of four electron micrograph panels arranged in a 2x2 grid. The top row is labeled "Central" and the bottom row "Peripheral". The left column is labeled "wt" and the right column "Tg". Each panel displays a high-magnification view of cellular ultrastructure, characterized by a dense distribution of small, roughly spherical vesicles or organelles. The "wt" panels show more organized, larger structures, while the "Tg" panels show a more uniform, granular appearance.
