Plots of Baseline and Follow-up Scores

* C-SSRS Intensity of Ideation subscale raw scores were transformed by adding 1 at both time points to enable calculation of the change score divided by the baseline score (Δ C-SSRS). The transformed scores are displayed in this graph. Note that five participants had minimal scores of 1 at both baseline and follow-up assessments, and two participants had changes from 9 at baseline to 1 at follow-up; the lines plotting their scores thus overlap in the graph.
