

Additional file 9. Overlap of differentially expressed genes in plasmacytoid dendritic cells

Additional figure S6. Venn diagram showing number of overlapping differentially expressed genes (DEGs) between the different plasmacytoid dendritic cell (pDC) treatment conditions. (FDR<0.05) Red: 975 DEGs in RNA-containing immune complexes (RNA-IC) vs mock stimulated pDCs. Blue: 73 DEGs in hydroxychloroquine (HCQ) treated, RNA-IC stimulated vs RNA-IC stimulated pDCs. Green: 3897 DEGs in the IRAK-4 inhibitor (I92) treated, RNA-IC stimulated vs RNA-IC stimulated pDCs.
