## Appendix 2. Quality grading

For the quality grading, a modified Grading of Recommendations Assessment, Development and Evaluation (GRADE) guidelines was adapted. Studies were graded as follows:

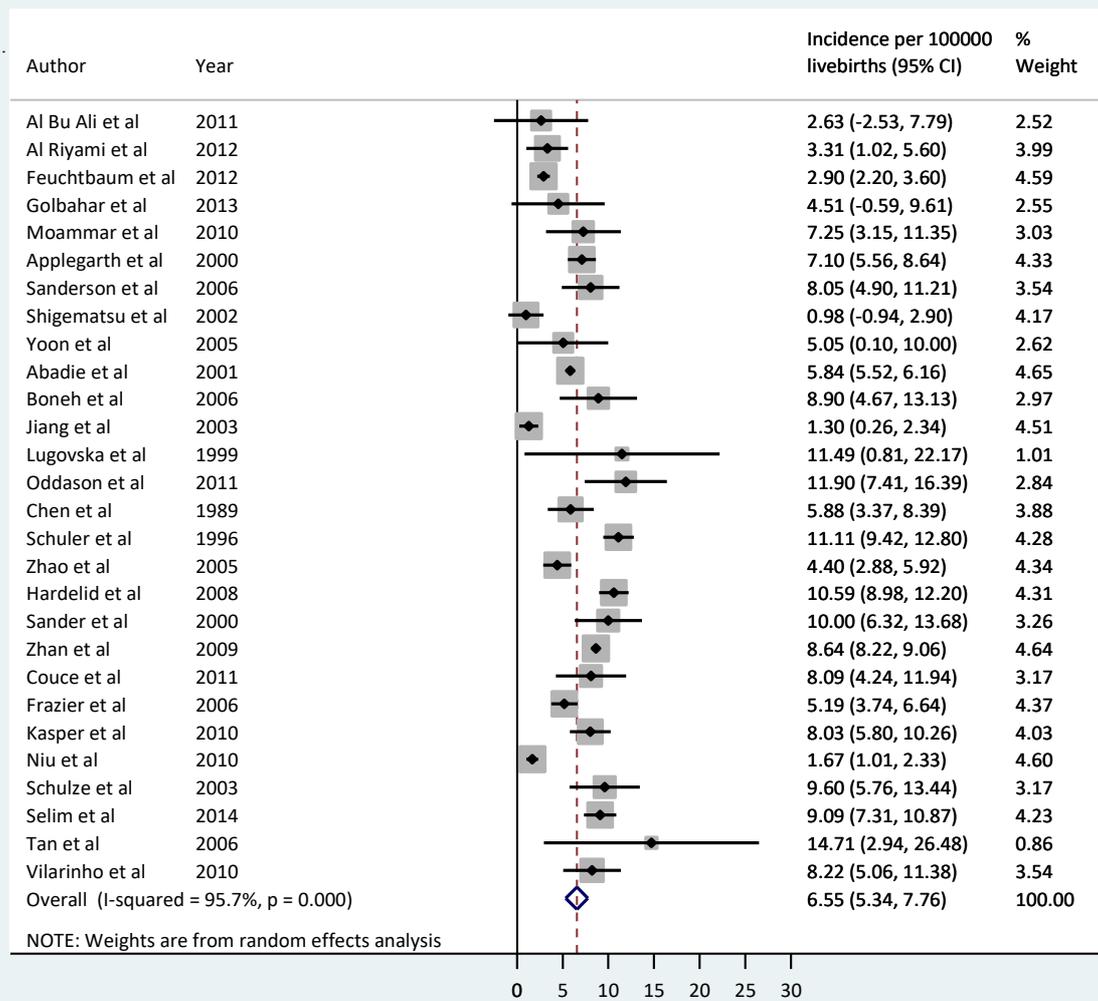

- o High quality: Studies with the entire four criteria, or any three including “study design”, highlighted above well represented;
- o Moderate quality: Studies with any three of the four criteria, or any two including “study design”, highlighted above well represented;
- o Low quality: Studies with any two of the four criteria, or “study design” only, highlighted above well represented; and
- o Very low quality: Studies with only one (excluding “study design”) or none of the four criteria highlighted above well represented.

### Appendix 3: Meta-estimates of specific IEM

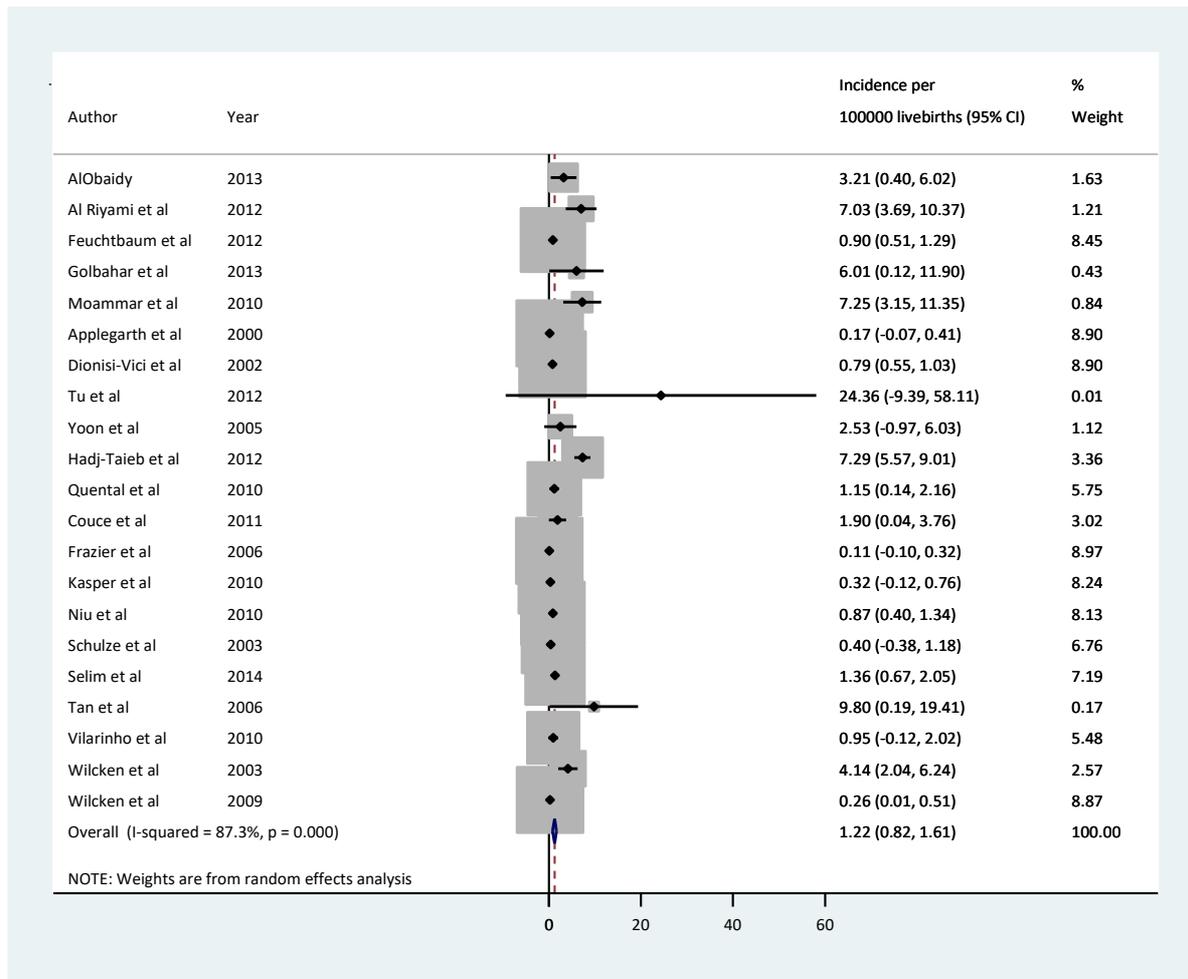

#### A 3.1. Meta-estimate of incidence of all amino acid disorders

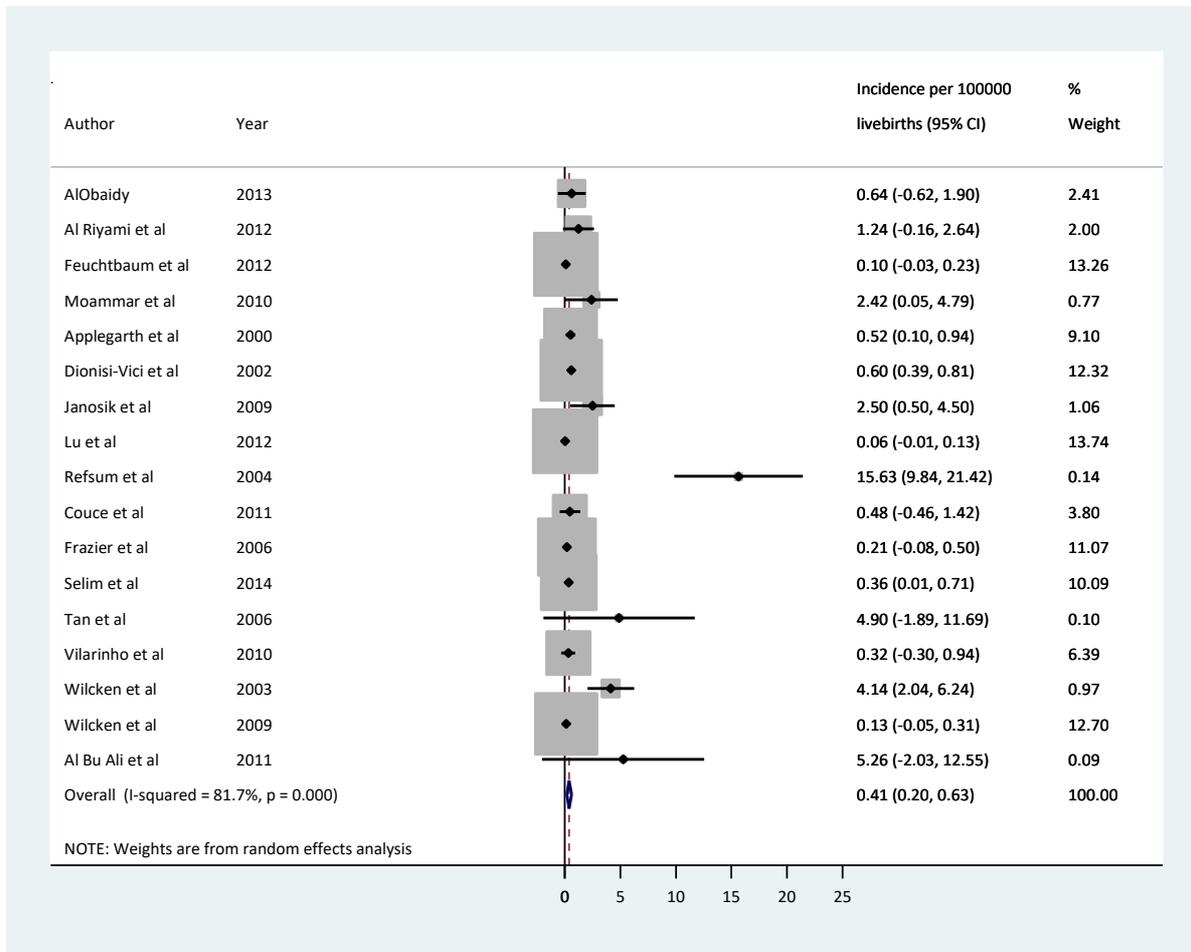

### A 3.2. Meta-estimate of incidence of phenylketonuria

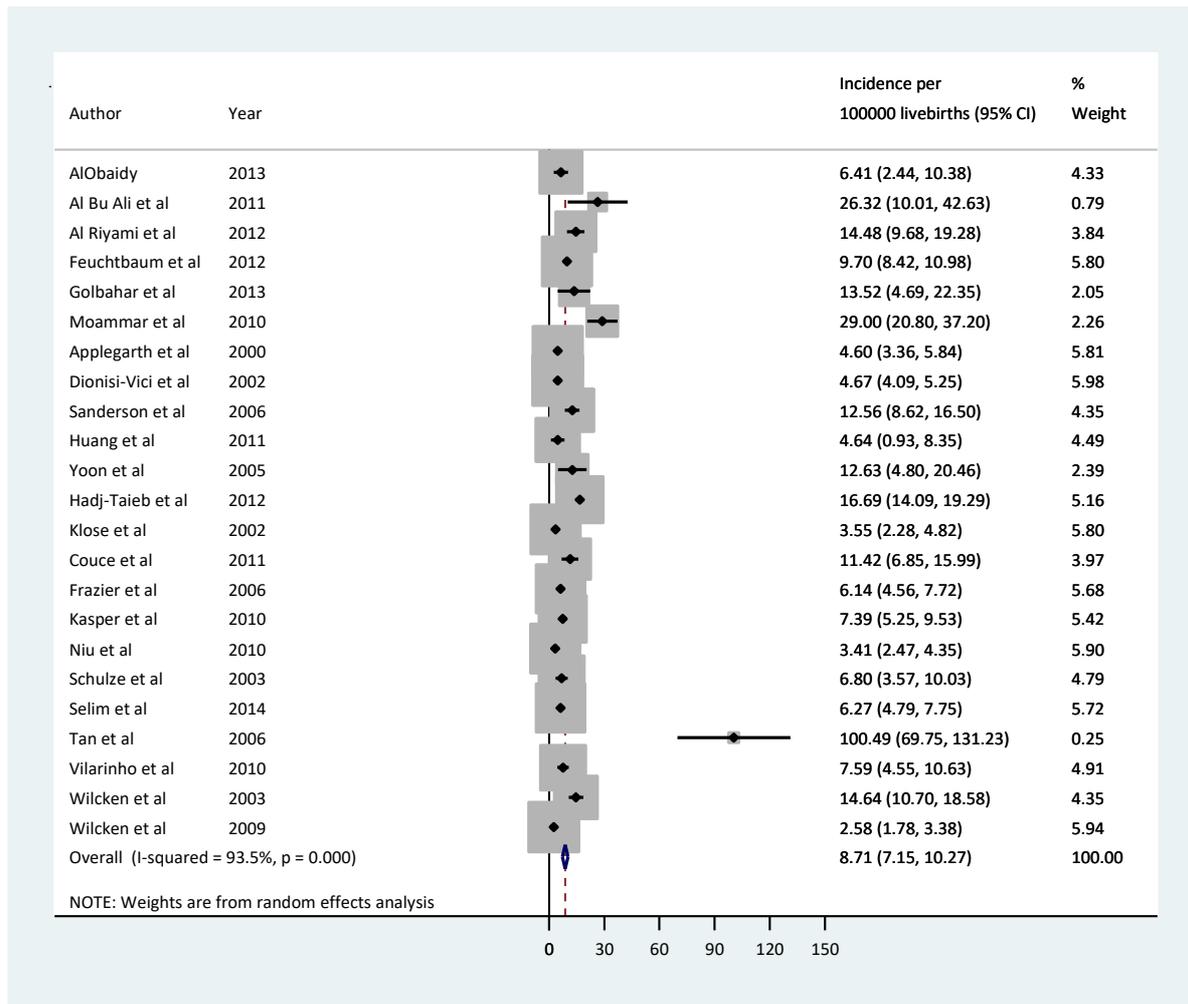

### A 3.3. Meta-estimate of incidence of maple syrup urine disease

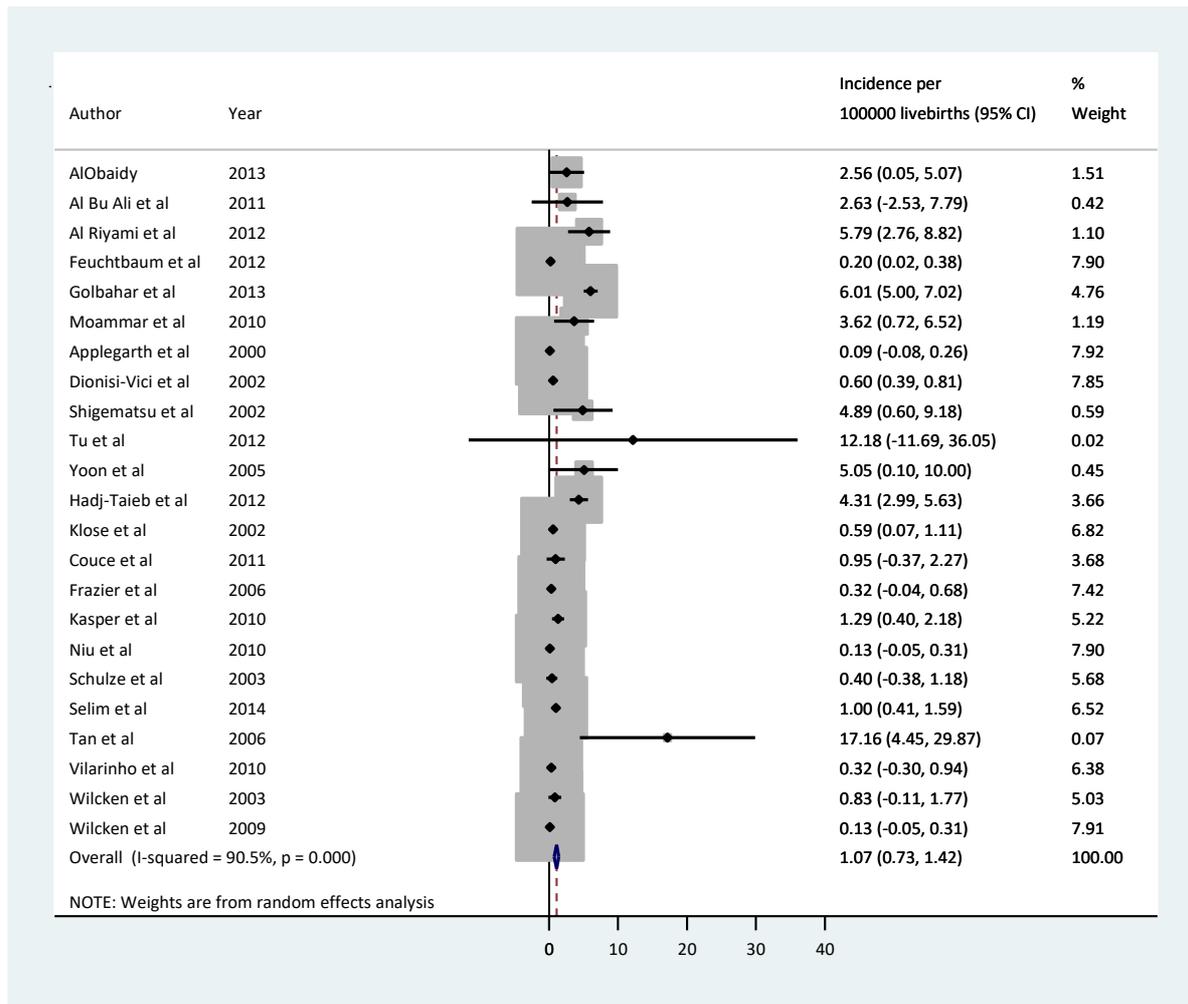

### A 3.4. Meta-estimate of incidence of homocystinuria

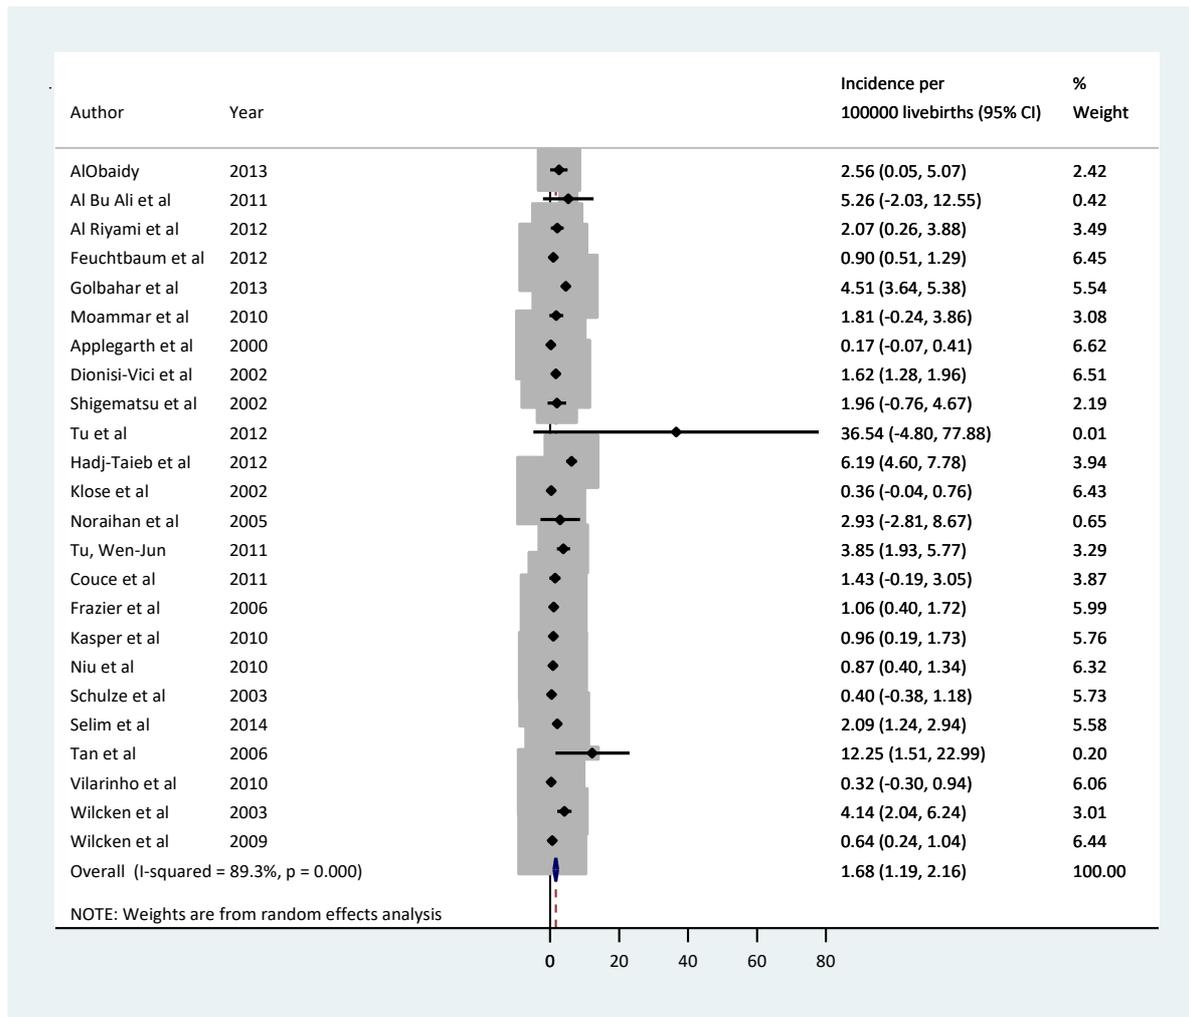

### A 3.5. Meta-estimate of incidence of all organic acidurias

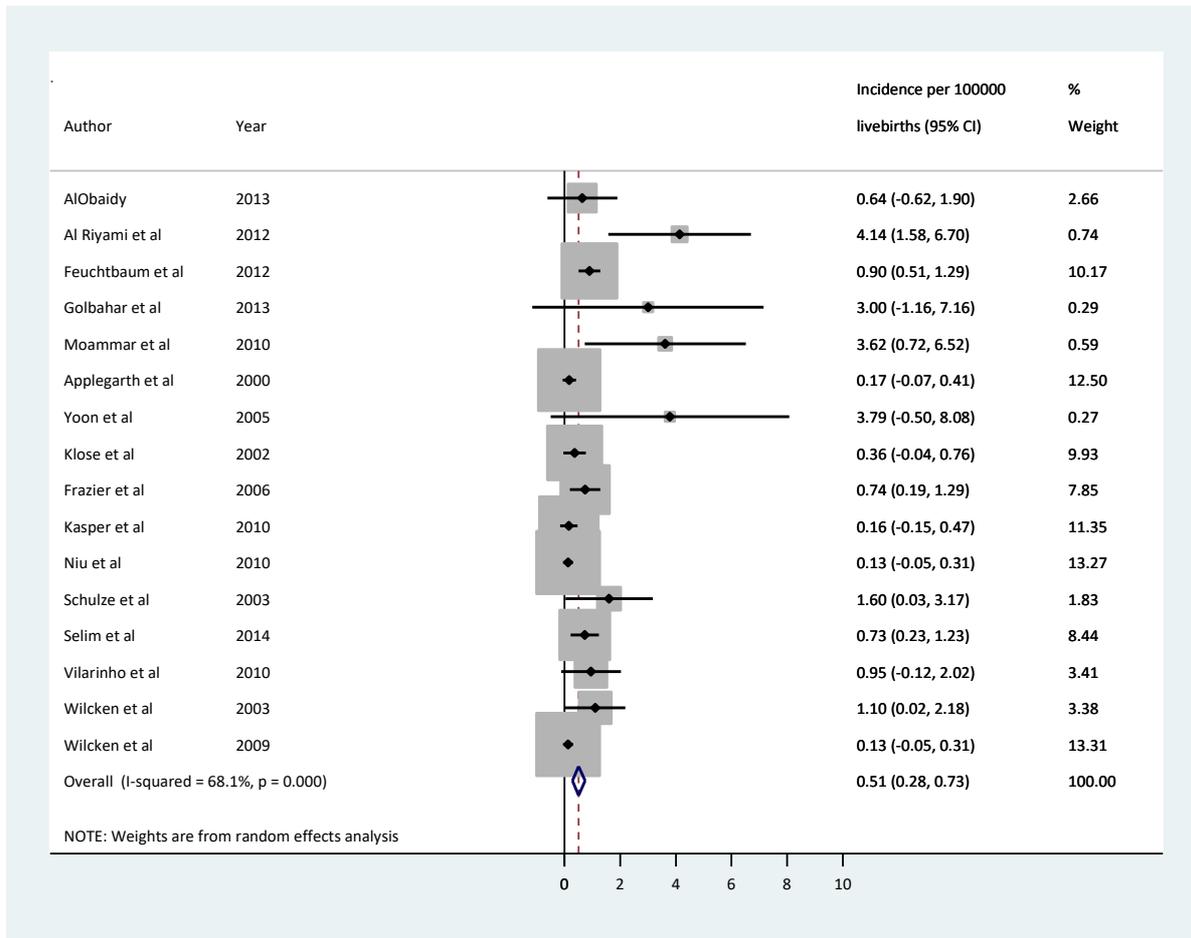

### A 3.6. Meta-estimate of incidence of propionic aciduria

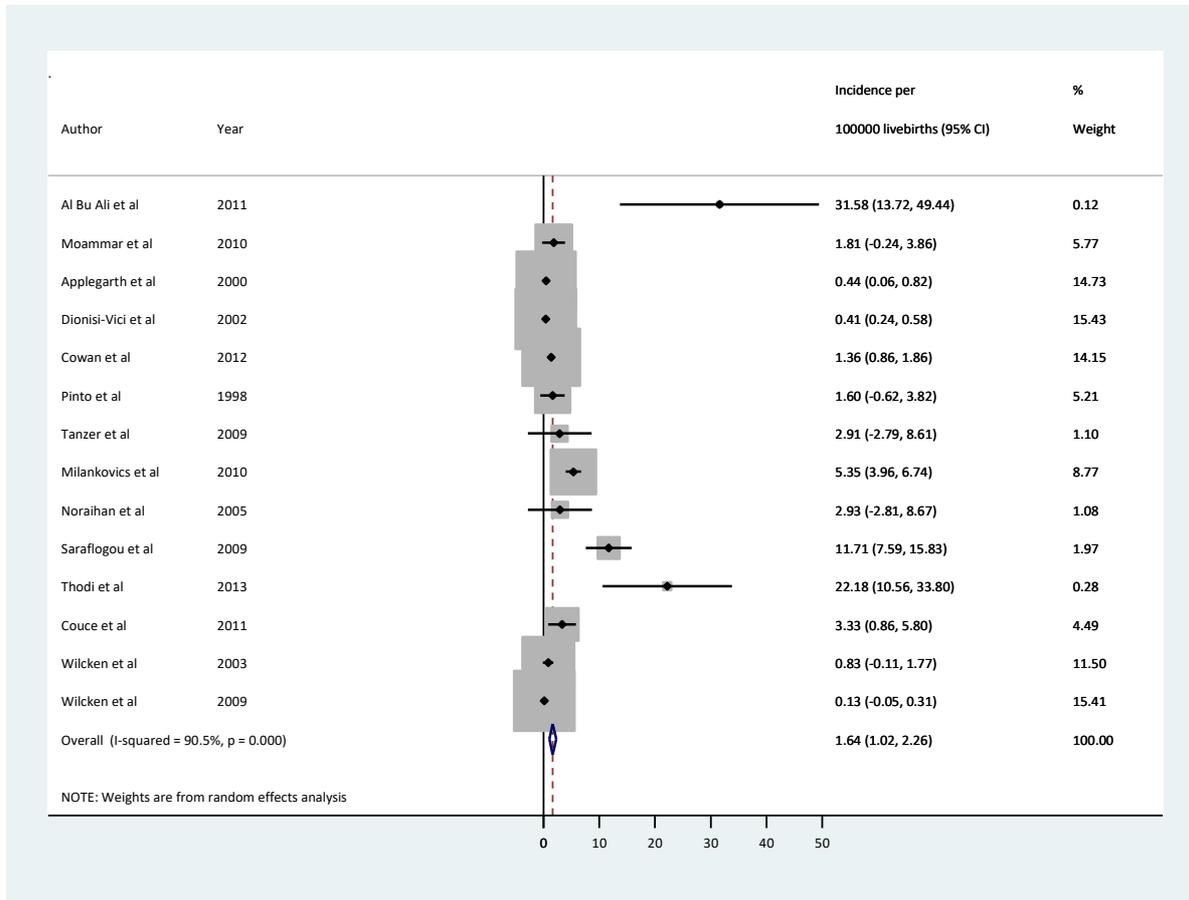

### A 3.7. Meta-estimate of incidence of methyl malonic aciduria

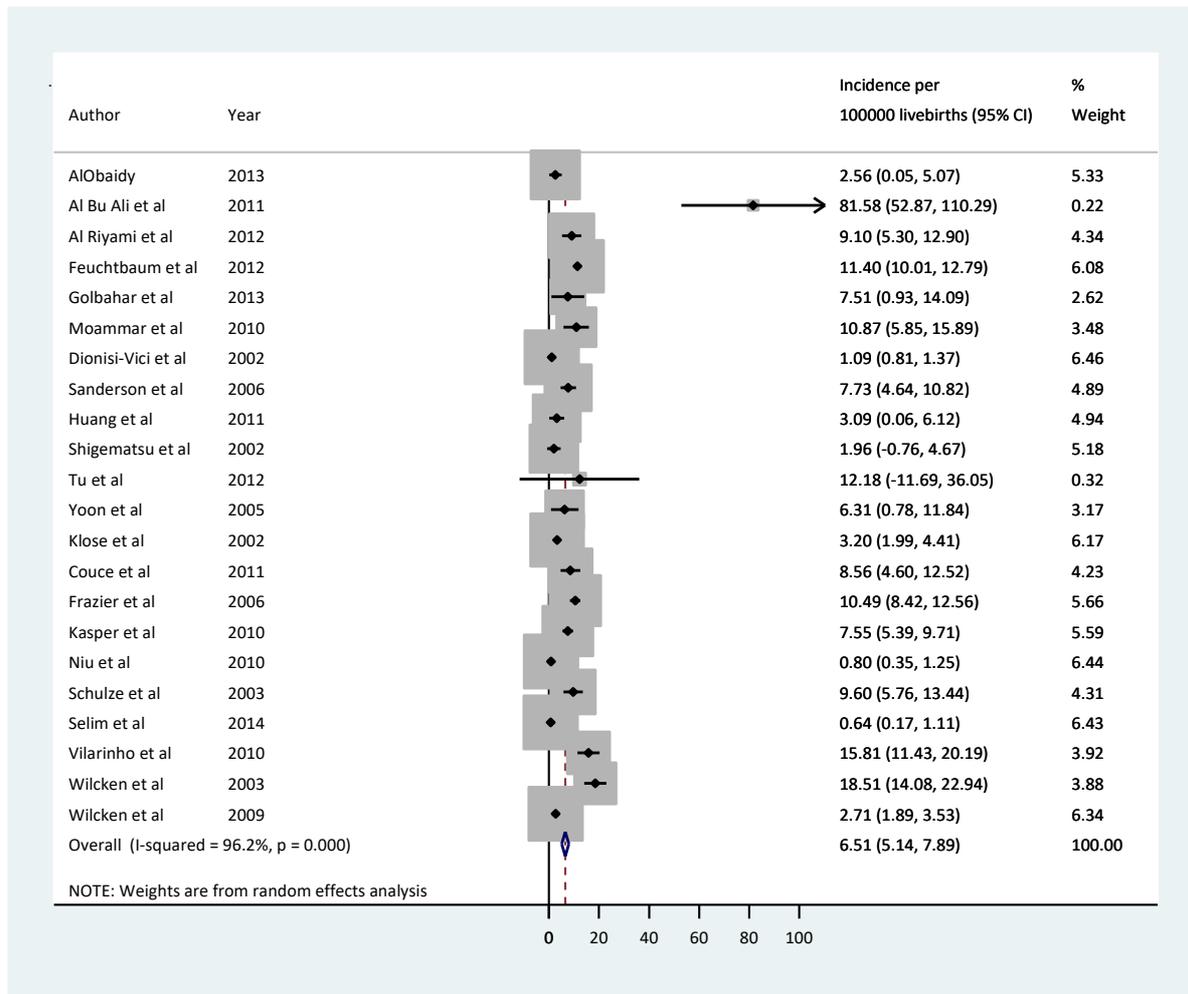

### A 3.8. Meta-estimate of incidence of isovaleric aciduria

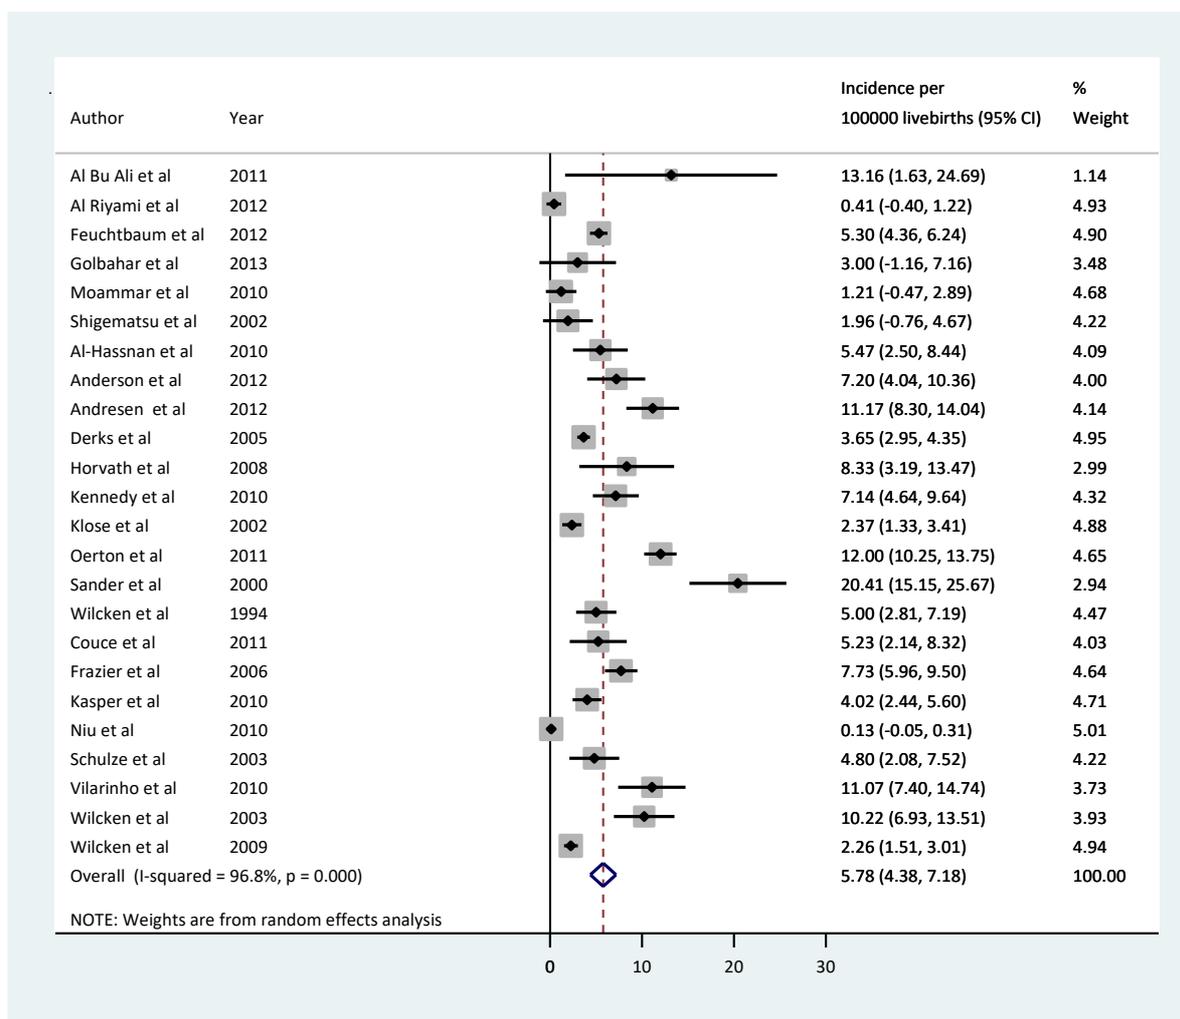

### A 3.9. Meta-estimate of incidence of biotinidase deficiency

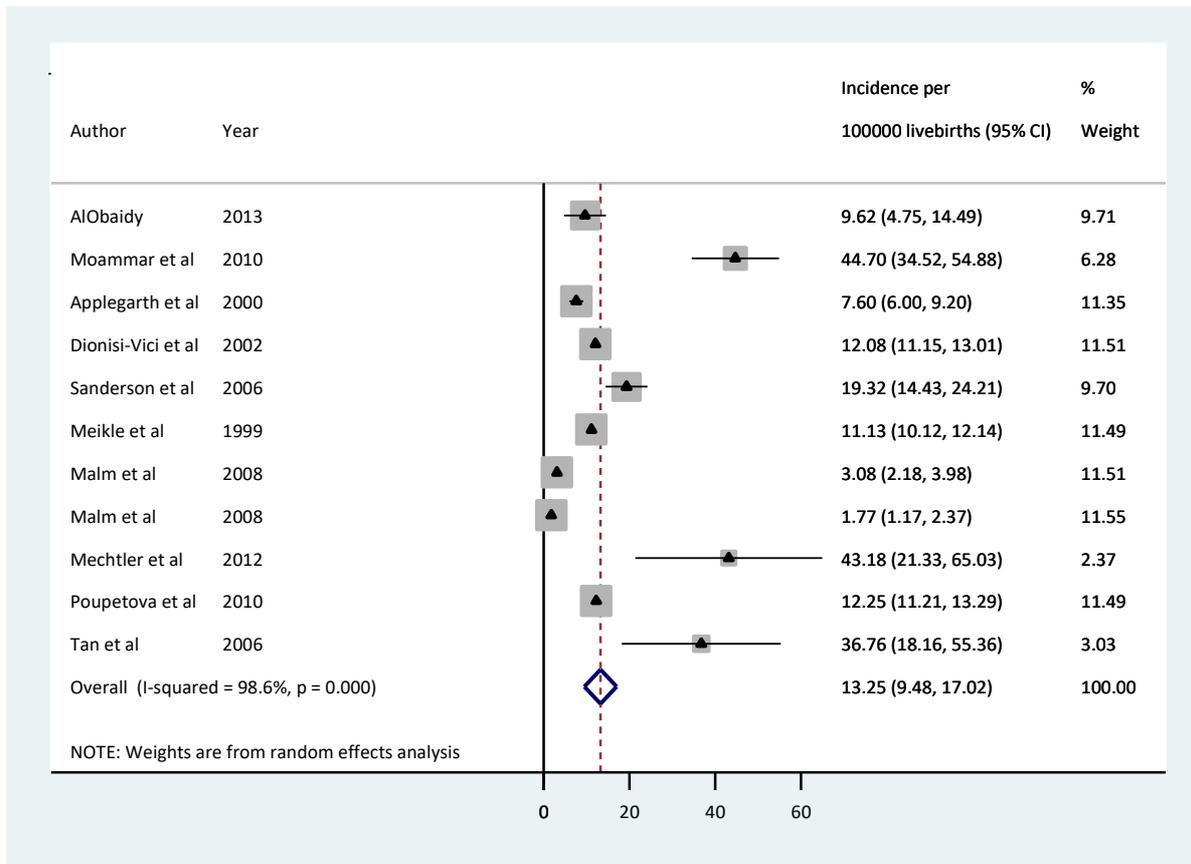

### A 3.10. Meta-estimate of incidence of all fatty acid disorders

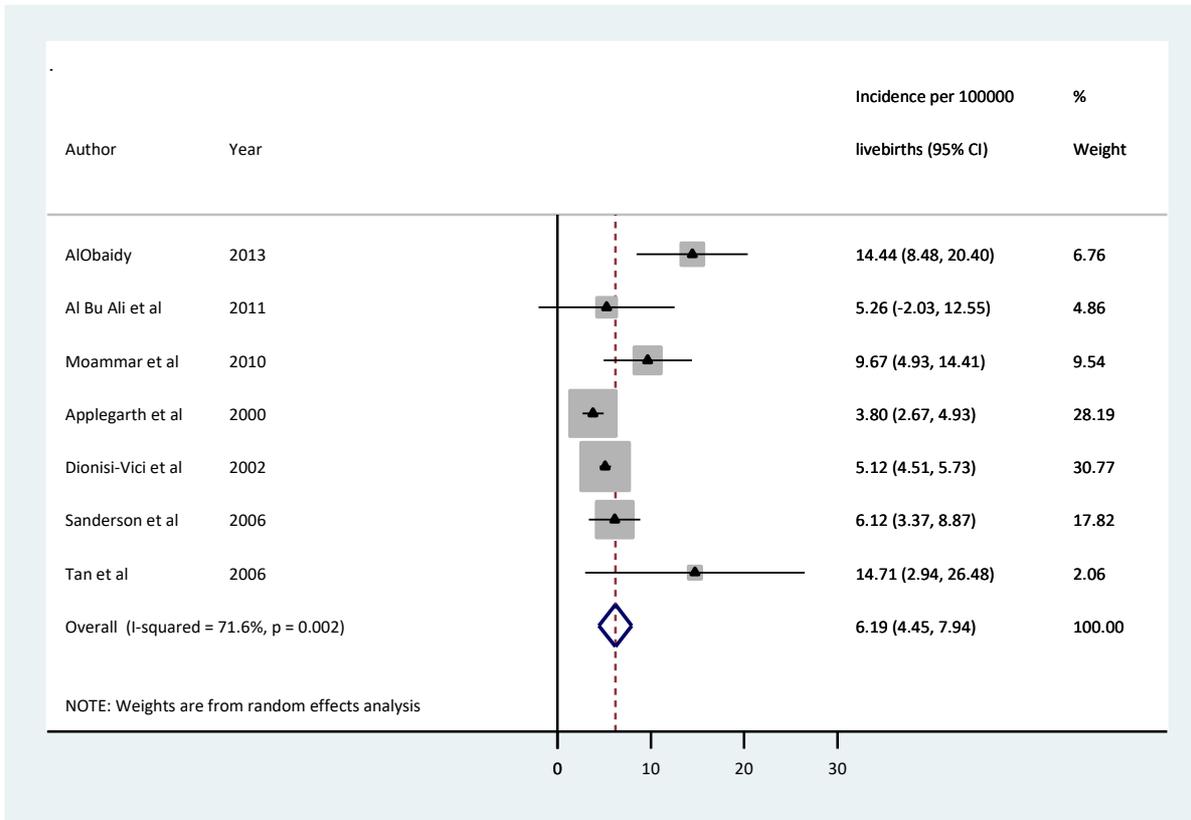

### A 3.11. Meta-estimate of incidence of medium chain acyl coenzyme A dehydrogenase (MCAD) deficiency

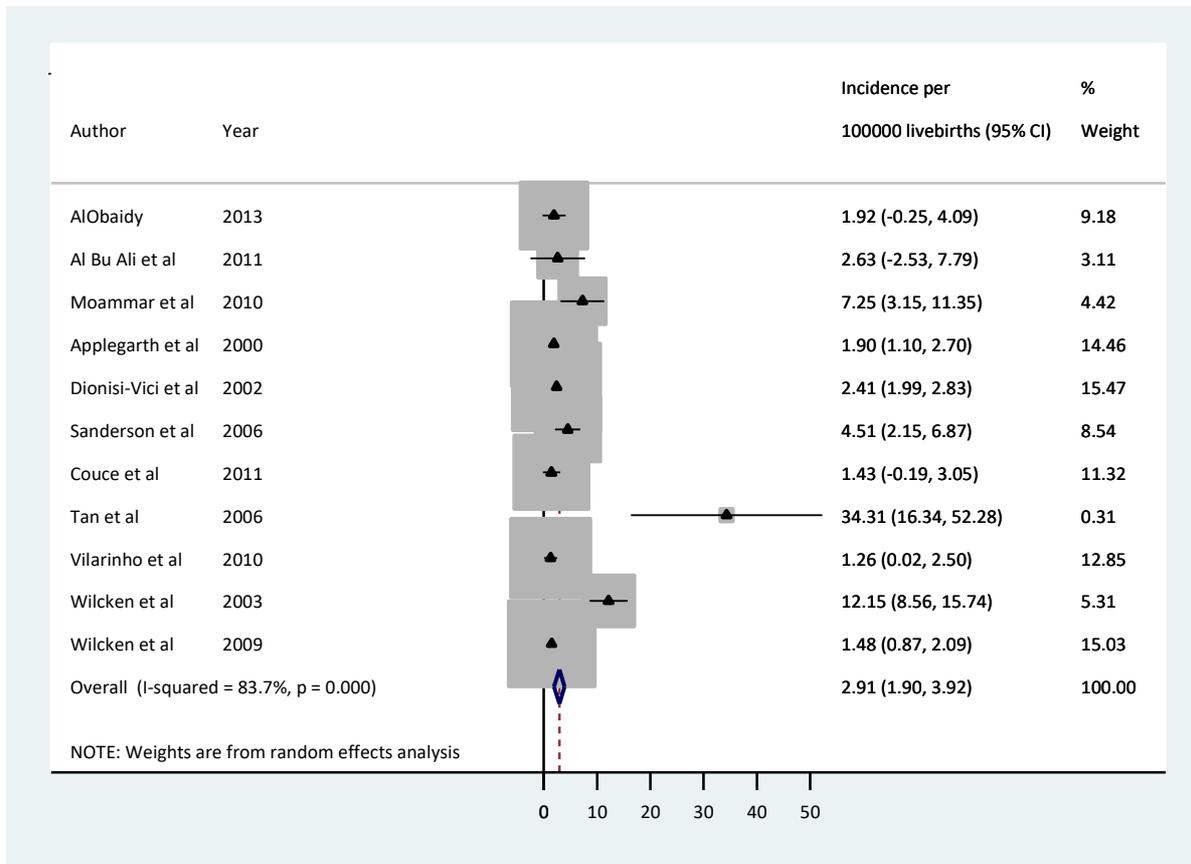

### A 3.12. Meta-estimate of incidence of all lysosomal storage disorders

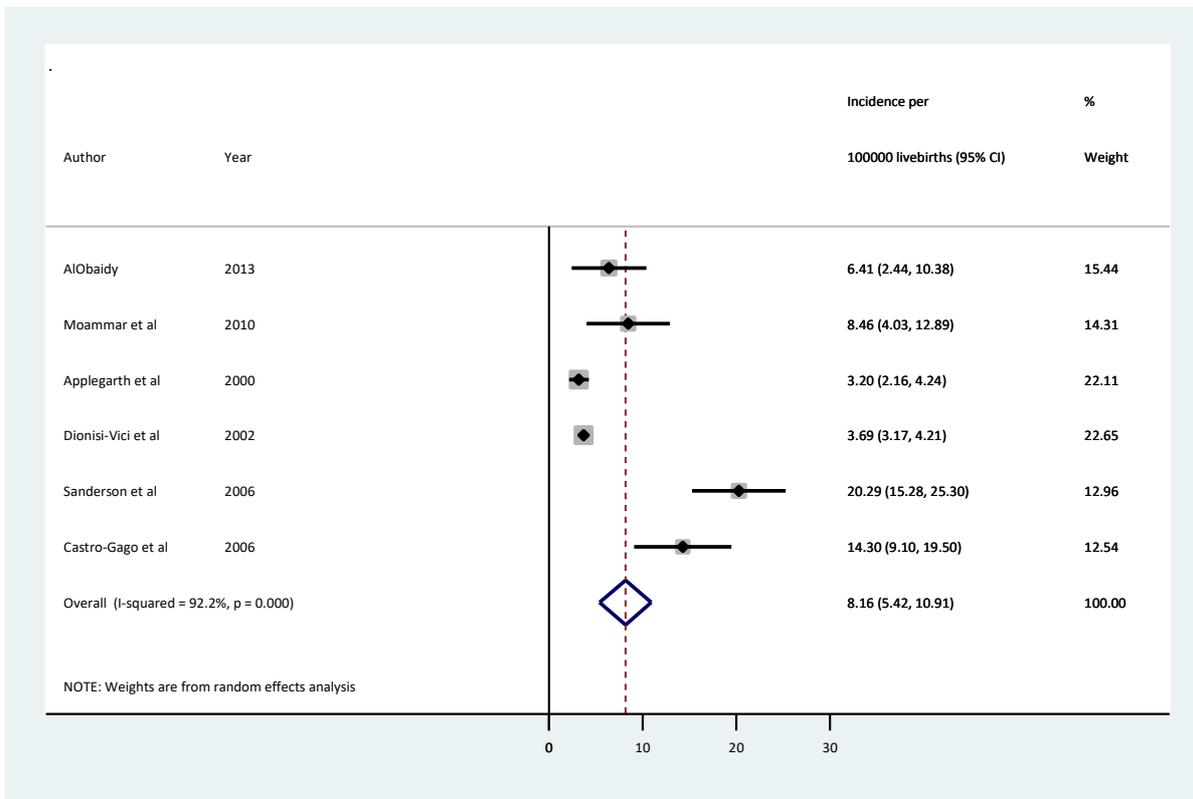

### A 3.13. Meta-estimate of incidence of all carbohydrate metabolism disorders

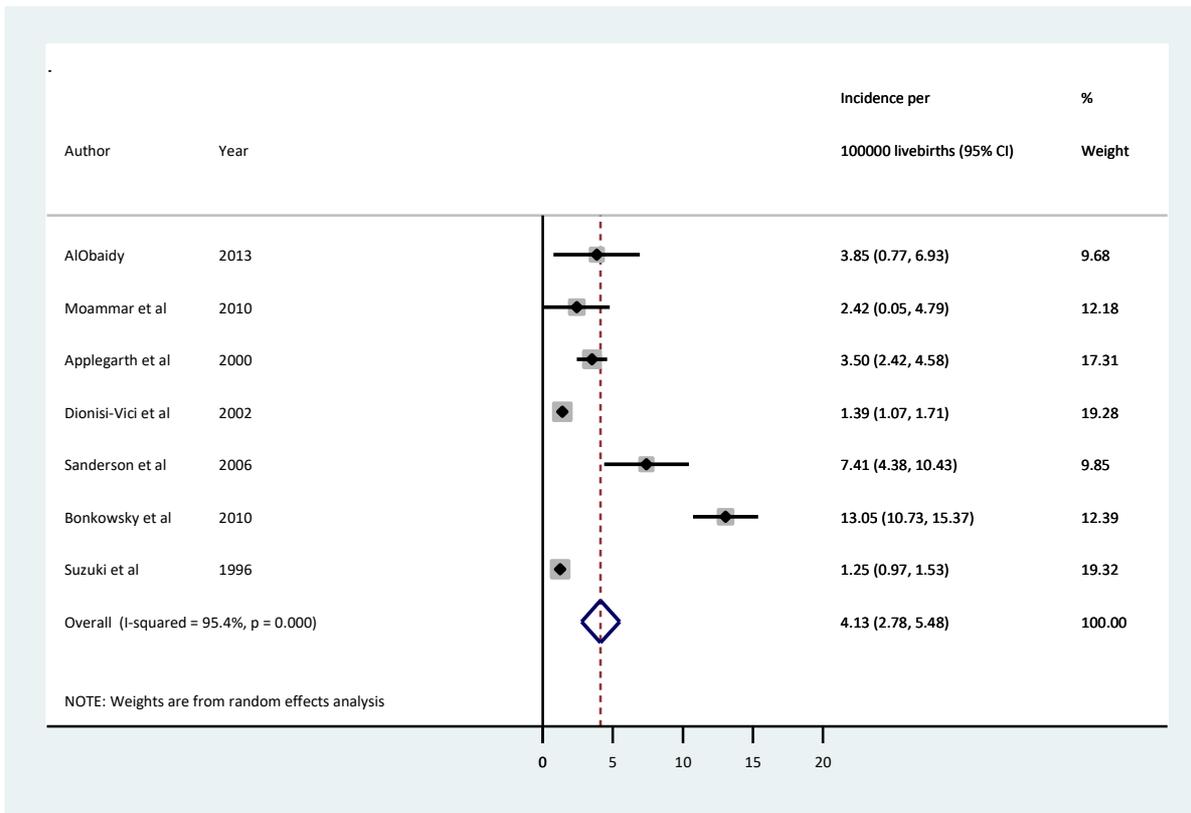

### A 3.14. Meta-estimate of incidence of all urea cycle disorders

### A 3.15. Meta-estimate of incidence of all mitochondrial disorders

### A 3.16. Meta-estimate of incidence of all peroxisomal disorders

## Appendix 4: characteristics of studies included for analysis of specific IEM categories

### A 4.1. Studies reporting estimates for amino acid disorders
