**Table 2 Supplemental Digital Content. Pharmacokinetic parameter estimates by non-compartmental analysis and population pharmacokinetic final model**

Parameter Estimates	Non-compartmental analysis (n=170)	Population pharmacokinetic model (n=71)	
		Final Model	Bootstrap
CL/F (L/h)	23.7 (4.0-131.4)	19.3 (5.3-75.7)	17.8 (13.7-24)
V (L)	35.6 (10.8-246.8)	23.7 (16.7-31.4)	26.7 (22.3-32.3)
Half-life (h)	0.95 (0.4-3.1)	0.9 (0.2-2.6)	1.1 (0.8, 1.3)
AUC <sub>inf</sub> (h*ng/mL)	980.2 (165.5-9320.7)	2077.4 (544.4-7537.0)	2247.2 (1666.7-2919.7)

Data are median (2.5th and 97.5th percentiles) values. Population PK parameter estimates from the final model and bootstrap are median typical values.

**Abbreviations:** CL/F= apparent oral clearance; V=volume of distribution; AUC<sub>inf</sub>, area under the concentration time curve from time 0 to infinity; T<sub>max</sub>=time to maximum concentration.

Figure 1. Individual plasma concentration time profiles from each previously published study.

Figure 2. Goodness-of-fit plots for the final model of a. Observed versus individual predicted concentrations; b. observed versus population predicted concentrations; c. conditional weighted residuals (CWRES) versus time after dose; and d. CWRES versus population predicted concentrations. For panels a and b, the dashed line of identity is included as a reference. For panels c and d, a solid line at  $y = 0$  is included as a reference.
