

S1 Fig. No significant toxicity of indole to fungi.

Indole was added into PDA medium with the concentration of 50 mg L⁻¹. Three pathogen fungi, *Fusarium graminearum* (*F. g*), *F. moniliforme* (*F. m*) and *Magnaporthe oryzae* (*M.o*) were grown on these plates. Methanol was added as the control (CK). Mycelia (**A**) were observed and their diameters (**B**) were measured and compared. No significant difference was detected with student's *t*-test. Error bars indicate SE (*n*=3).
