

Supplemental Figure 2

SFigure 2: A) For flow cytometry studies, cells were identified by forward scatter by side scatter, then gated for CD45 followed by F4/80 and CD11b. F4/80^{hi} and F4/80^{lo} cells were then analyzed separately for CD64 and MerTK expression in order to designate them as macrophages or monocytes. B) MCP-1 or C) CCL2 expression during involution in publicly available datasets from Clarkson et. Al. and Stein et. Al.
