

991 **Supplemental Figures and Tables:**

992 **Supplemental Figure 1:** IL-6 concentration in media from various control experiments
993 performed to confirm exosome specific activation of inflammatory mediators. Shown here is an
994 example of myometrial (A), decidual (B) and BeWo cells (C).

995 On the x axis are all the treatments included:

996 Control: negative control

997 Lipopolysaccharide (LPS) was used as a positive control

998 Cold – cold treatment of cells to prevent endocytosis of exosomes

999 Heat inactivation – to disrupt exosomal membrane and denature proteomic cargo

1000 Sonication - to disrupt exosomal membrane and denature proteomic cargo

1001 Control and oxidative stress exosomes treatments at a dose of 10^7

1002 A – Myometrial cells treated with LPS and control and oxidative stress exosomes show increased
1003 IL-6 compared to control. Cold, heat and sonication did not change IL-6 compared to negative
1004 control

1005 B - Decidual cells treated with LPS and control and oxidative stress exosomes show increased
1006 IL-6 compared to control. Cold treatment reduced IL-6 more than negative control settings
1007 whereas heat and sonication did not change IL-6 compared to negative control.

1008 C – BeWo cells increase IL-6 in response to LPS. No change was seen with any other conditions
1009 including exosome treatment.

1010

1011 **Supplemental Figure 2:** 3D reconstructions of confocal images of each target cell studied.
 1012 Blue is DAPI which shows the nucleus. Red is a cytoplasmic protein either α or β actin.
 1013 Exosomes are shown in green. Exosomes are identified within each cell type (myometrial,
 1014 decidual and BeWo) by yellow arrows.

1015

1016 **Supplemental Table 1A:** Cytokine and PGE₂ concentrations in myometrial cells treated with
 1017 control exosomes.

IL-6	Control	Exo 10 ⁵	Exo 10 ⁷	Exo 10 ⁹
