**Supplementary Table 1. Examples of selected studies that have shown facilitation between parasites.** 1<sup>st</sup> column: host species full name, strains, genotypes, varieties, or breed (when applicable). 2<sup>nd</sup> and 3<sup>rd</sup> columns: "Facilitator" and "Facilitated" parasites species full names, strains, genotypes, or varieties (when applicable), and mode of transmission (H: horizontally; V: vertically; M: mixed transmission mode). 4<sup>th</sup> column: symmetry of the interaction ("+": positive; "-": negative; "0": neutral; "?": unknown effect for each partner of the interaction; 1st: facilitator; second: facilitated). 5<sup>th</sup> column: order of infection (F<sup>R</sup>: facilitator; F<sup>D</sup>: facilitated), and time interval between infections for sequential infections; "simultaneous": both parasites were inoculated at the same time. 6<sup>th</sup> to 8<sup>th</sup> columns: effect of facilitation on infection "success" (i.e. establishment, occurrence or prevalence), infection "intensity" (i.e. parasite load, growth, and/or development), and transmission of facilitated parasites. 9<sup>th</sup> column: consequences for the host fitness (i.e. virulence). 10<sup>th</sup> column: underlying mechanism when known; 11<sup>th</sup> column: type of study (L: laboratory; F: field; R: review; M: meta-analysis); 12<sup>th</sup> column: reference(s). Other abbreviations: ↑: increase; ↓: decrease; ↔: not affected; "?": unkown; "-": not studied; "na": not applicable.

Host	Facilitator	Facilitated	Sym.	Infection order	success	intensity	transm.	host fitness	Mechanism	Type	Ref.
Rabbit ( <i>Oryctolagus cuniculus</i> )	strongylid nematode ( <i>Graphidium strigosum</i> )	H strongylid nematode ( <i>Trichostrongylus retortaeformis</i> )	H -/+	na	-	↑	-	-	?	F	[1]

Tomato plant ( <i>Solanum lycopersicum</i> cv Moneymaker)	Tomato Spotted Wilt Virus (Topsovirus ; isolate TSWV-MT2)	H	Spider mite ( <i>Tetranychus urticae</i> )	H	?/+	F <sup>R</sup> then F <sup>D</sup> (5 weeks)	-	↑	-	↑ defences ↑ amino acid	?	L [50]

a due to cytoplasmic incompatibility.

b population dependent effect

c downstream of JA and SA accumulation

d only in absence of coinfection: *T. urticae* is outcompeted by *T. evansi* when sharing the same leaf

e but no difference in the per capita (per helminth) number of eggs

f compensate for the loss of digestive and excretory systems (γ -bacteria produce CO<sub>2</sub> by the oxidation of reduced inorganic compounds e.g. sulphide to sulphate. δ -bacteria reduce sulphate products produced by the γ-bacteria, producing sulphide)

g male effect on fecundity

h age-dependent effect on intensity

i intensity increase in the lungs only

j only when the host is feeding on its native host *Pinus sylvestris* but not *P. contorta*

k systemic response of the host
