VOC, volatile organic compound; TVOC14, sum of total 14 VOCs; TVOC11, sum of 11 VOCs (excluding three most dominant compounds: ethanol, acetone and 2-propanol); β , regression model estimate; SE, standard error; % Δ , percentage change was estimated by the following equation: $(\exp(\beta)-1)*100\%$; p-value <0.05 shown in bold, 0.05 < p-value <0.1 shown in italics.

*, the models used indicator variables (≥ 15 minutes; reference group: <15 minutes) to estimate VOC exposures.

The linear mixed-effect models had random effects of hospital and participants nested within hospitals, and also included bystander cleaning tasks and product-use.

Supplemental Figure 1. Median concentrations in parts per billion for personal and mobile-area VOCs by hospital unit.

VOC, volatile organic compound; MChI, methylene chloride; MM, methyl methacrylate. Note: Scale is different for each chemical, and chemicals arranged in a descending order of concentration range.
