Supplementary Figure 5. Time course of excision after 4-HT exposure. a. Embryos were treated with 5 μ M 4-HT at either 6 hpf or 10 hpf. Embryos were pooled (n=20) and collected at 30, 60, 120, and 240 minutes after exposure. 0 indicates a pool of siblings not exposed to 4-HT. Note: 6 hpf and 10 hpf not treated control PCRs were performed on the same DNA sample.
