Supplementary Table Column labels

meanWT = mean normalized gene expression level in wild-type cells
meanWTHET = mean normalized gene expression level in wild-type cells from mosaic female Mecp2+/- mice
meanKO = mean normalized gene expression level in Mecp2 knockout cells
meanMT = mean normalized gene expression level in MECP2 mutant cells
Log2FC = Log2 fold change between the two conditions in the table
pval = P value associated with the difference in gene expression between the two conditions in the table
qval = the q-value associated with the difference in gene expression between the two conditions in the table. The q-value is an adjusted p-value for the false discovery rate.

Differential expression analysis was performed with Monocle2
