|----------------------------------|--------|---------------------------------------|---|
| FAO food balance sheet (2013)[5] | n/a    | Calculated from available food supply | <ul style="list-style-type: none"> <li>Protein supply (g/capita/day) = 81.58</li> <li>Protein supply (kcal/capita/day) = 326.32; comprises approximately 11% of available energy/capita/day</li> <li>Average supply of protein of animal origin (3-year average) <ul style="list-style-type: none"> <li>2011-2013 = 44 g/capita/day</li> <li>1991-2001 = 42 g/capita/day</li> </ul> </li> </ul> |

#### Nationwide surveys

Mahmud et al. (2015)[6]

MANS 2014 sample

Single 24-hr recall

Prevalence of Malaysian adults that met the RNI for protein = 40.4% (95% CI 37.9, 43.0)

- Males = 39.4% (95% CI 35.9, 43.0)
- Females = 41.5% (95% CI 38.3, 44.8)

50.7% of adults had intakes exceeding the RNI

8.8% had intakes below the RNI
