

S4 Fig. Flow cytometric analysis of intracellular staining analysis for Gag p24-specific IL-2, TNF α and IFN γ -producing CD4⁺ and CD8⁺ T cells. Cryopreserved cells were stimulated with peptide pools (2 μ g/ml) in the presence of Brefeldin A for 6 h. Intracellular cytokine staining was performed (see Methods) and analyzed by flow cytometry. Upper two panels are CD4⁺ T cells and the lower two panels are CD8⁺ T cells. The annotated quadrants indicate the gates used to quantify % cytokine positive cells.
