

Supplementary Materials

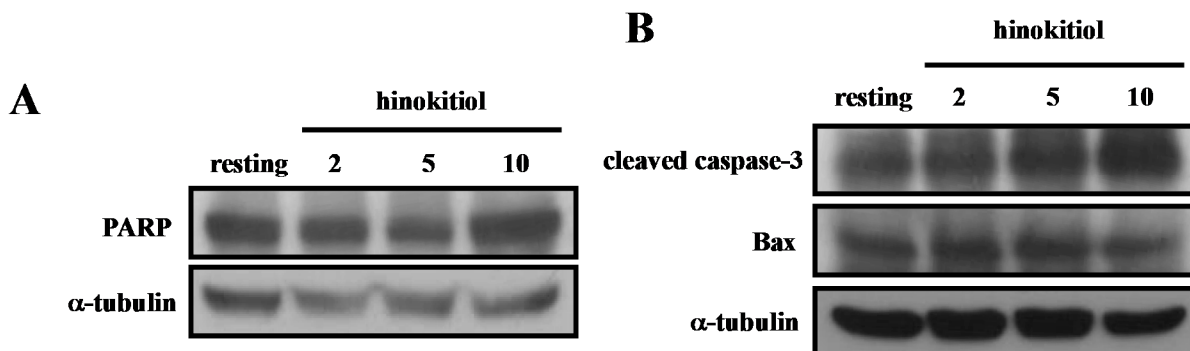

Figure S1. Effect of hinokitiol on PARP, cleaved caspase-3, and Bax expression in VSMCs. VSMCs were pre-treated in the presence or absence of hiokitiol (2–10 μ M) for 24 h, and the cells were then lysed. The level of (A) PARP, (B) cleaved caspase-3, and Bax was analyzed by SDS-PAGE and immunoblotting. Data are representative of two separated experiments with similar results.

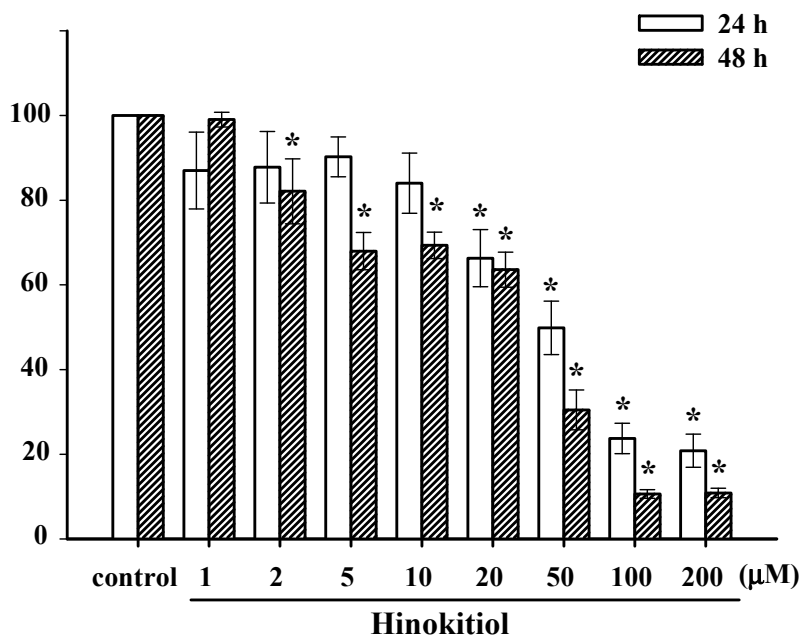

Figure S2. Effects of hinokitiol on cell proliferation of vascular smooth muscle cells (VSMCs). VSMCs were co-treated with hinokitiol (1–200 μ M) for 24 or 48 h, and cell proliferation was determined using the MTT assay. Data are presented as the mean \pm S.E.M. ($n = 3$). * $p < 0.05$ compared to the control group.
