Abbreviations: BMI, body mass index; CVD, cardiovascular disease; DM, diabetes mellitus; n, number; SD, standard deviation. Body mass index was calculated as weight in kilograms divided by height in meters squared. Categories were defined as normal weight:  $18.5 < 25 \text{ kg/m}^2$ , overweight:  $25 < 30 \text{ kg/m}^2$  and obese:  $\geq 30 \text{ kg/m}^2$ .

Data are mean (SD) or median (interquartile range).

Total N varies due to variation in the amount of missing data for different covariates.
