

Table S2. Theme 2 Quality of Relationships

Participants who gave their written consent at time of trial entry	Participants for whom a consent waiver was used
If they're having an emergency and you think they need to take a chance in that trial thing then you should do it. C02	I went to see (consultant first name), yeah the man who saved my life. He brought me in 4 weeks later and we had coffee and we talked and we cried, he just kept apologising and it wasn't that man's fault. W01
"I think the staff always have your best interests at heart" C05.	I mean ultimately, unless you're in the profession, you don't really know what's going on do you?" Partner of W16.
Patient:I do specifically remember him saying to me though is it alright if we give you this Partner:I can remember that Patient: that was that Andy wasn't it Partner:Yeah he was good him Patient:Yeah. C09	I mean it obviously saved my life I'm still here aren't I? W22
I just remember the doctors attending to me and giving me all this information and they looked after me really well. C04	It doesn't bother me taking part in any research you know because to me that's how we progress, if no one took part in research we wouldn't be where we are today medically and my life may not have been saved W02
I think when you go in there you're in the hands of the doctors anyway and so whatever it is they decide they're gonna give ya you just take it a don't ya? C08	I think he (partner) should know that I am involved in it but as far as the decision then that's actually up to the woman isn't it, at the end of the day it's their body, they have gone through the experience, all the partner's done is be there. W20
There wasn't one point where I felt <i>What have they done?</i> or <i>What have they put me (in)?</i> I felt really safe the whole time. C05	
At the time I reckon they (doctors) probably know best. C10
