

A**B**

Additional Figure 1: Tissue specific expression of the *Esi3* genes across thirteen *T. aestivum* tissue types assayed by microarray. **(A)** Young tissue types ranging from germinating seed to seedling stages. **(B)** Mature tissue types before anthesis, 3-5 and 22 days after pollination (DAP). Values are RMA normalized and are in log₂ units. All microarray values had 4 subtracted, this was treated as background.
