

Figure S11. The hairpin structures of miR-n026 and their expression

The hairpin structures of (A) can-miR-n026, (B) stu-miR-n026 and (C) sly-miR-n026, respectively. Color indicates the possibility of base-pairing. (D-F) Small RNA mapping results on the homologous region of miR-n026 in pepper, potato and tomato, respectively.
