

Figure S5: Injury is not linked with alterations in the number of stable inhibitory interneurons in the hippocampal CA region. (a-c) Injury is not linked to changes in the number of WFA⁺ PV⁻, WFA⁻ PV⁺, or WFA⁺ PV⁺ cells in the CA region of the hippocampus (One-way ANOVA, n=6-8 mice/group). No significant effects of MMP8 downregulation (shRNA treatment) were observed. Scale bar=200 μ m. Error bars are s.e.m.
