

7
8 **Supplementary figure 1.** Serum hormone levels separately at base line and trigger day
9 during ovarian stimulation cycles. (a-d) Serum hormone levels were significantly changed
10 in same group at two time point but without significant difference between groups in FSH
11 ($F_{\text{times}(1,17)} = 55.81, P < 0.0001; F_{\text{groups}(2,17)} = 0.18, P = 0.83$)(a), E₂ ($F_{\text{times}(1,17)} =$
12 $286.36, P < 0.0001; F_{\text{groups}(2,17)} = 1.49, P = 0.25$)(c) and Progesterone ($F_{\text{times}(1,17)} =$
13 $9.80, P < 0.01; F_{\text{groups}(2,17)} = 0.43, P = 0.66$)(d), as well as any difference was not shown
14 in either time points and groups for LH ($F_{\text{times}(1,17)} = 2.50, P = 0.13; F_{\text{groups}(2,17)} = 1.22,$
15 $P = 0.32$)(b).
