

Expression and potential role of cellular retinol binding protein I in psoriasis

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: Expression of Ki-67, CK1, CK17, CRBPII and RXR α in human normal and psoriatic skin.
Left panel: Representative immunostaining showing an increase of epidermal Ki-67 positive nuclei, CK17 and CRBPII expression in psoriatic skin; whereas RXR α and CK1 expression decrease. Original magnification, 100X. * p < 0.05; ** p < 0.01 at Student's *t*-test. Right panel: Bar graphs showing the percentages of markers expression in normal and psoriatic skin.

Supplementary Table 1: Biostatistical analysis of selected CRBPI SNPs

Selected SNPs							
rs184157 A/G		rs295493 A/G		rs893704 G/T		rs2071387 C/T
