

SUPPLEMENTARY INFORMATION

SUPPLEMENTARY TABLES

Table S1: Plant species and number of individual trees included in fruit biomass calculations. Of all plants recorded during transect sampling, only species included in our monthly phenology surveys and individual plants with a DBH (diameter at breast height) greater than the species-specific threshold were used in biomass calculations of fruit abundance. Plants below a certain size do not produce ripe fruit or support the weight of a monkey. We calculate the threshold as the minimum DBH for that plant species that we have observed capuchins to forage in (Melin *et al.*, 2014a).

| Species | Threshold DBH (cm) | # Foraging Records Used to Calculate Threshold DBH | # Trees in Transects | # Trees Used for Biomass Calculation |
|--------------------------------|---------------------------|---|-----------------------------|---|
| <i>Alibertia edulis</i> | 0.95 | 74 | 1639 | 1219 |
| <i>Allophylus occidentalis</i> | 5.41 | 62 | 476 | 123 |
| <i>Annona reticulata</i> | 7.96 | 96 | 112 | 60 |
| <i>Bromelia pinguin</i> | | 168 | 739 | 739 |
| <i>Bromelia plumieri</i> | | 986 | 476 | 476 |
| <i>Bursera simaruba</i> | 10.19 | 481 | 633 | 290 |
| <i>Byrsonima crassifolia</i> | 6.37 | 333 | 432 | 282 |
| <i>Cassia grandis</i> | 10.00 | 1 | 1 | 1 |
| <i>Castilla elastica</i> | 14.97 | 39 | 51 | 4 |
| <i>Cecropia peltata</i> | 12.41 | 134 | 26 | 18 |

| | | | | |
|-------------------------------------|-------|------|------|-----|
| <i>Cordia guanacastensis</i> | 1.13 | 98 | 1248 | 965 |
| <i>Cordia panamensis</i> | 6.68 | 53 | 349 | 159 |
| <i>Curatella americana</i> | 8.12 | 37 | 108 | 43 |
| <i>Diospyros salicifolia</i> | 3.18 | 43 | 344 | 205 |
| <i>Diphysa americana</i> | 20.94 | 13 | 25 | 5 |
| <i>Dipterodendron costaricensis</i> | 15.60 | 95 | 59 | 15 |
| <i>Eugenia salamensis</i> | 8.28 | 160 | 187 | 85 |
| <i>Ficus cotinifolia</i> | 29.73 | 126 | 2 | 2 |
| <i>Ficus hondurensis</i> | 18.52 | 57 | 12 | 5 |
| <i>Ficus morazaniana</i> | 32.47 | 26 | 2 | 1 |
| <i>Ficus ovalis</i> | 26.42 | 95 | 4 | 2 |

Table S2: Ethogram used during behavioral data collection, together with frequency of behaviors recorded. One behavioral state depicting the behavior of the majority of group members was recorded on the hour and half-hour while following wild white-faced capuchin monkeys. 912 scans were recorded over the study period.

| Code | Name of State Behavior | Description | Number Records | % Group Scans |
|-------------|-------------------------------|--|-----------------------|----------------------|
| GFFL | Foraging flowers | Group is in a food patch where flowers are being consumed | 3 | 0.33 |
| GFFR | Foraging fruit | Group is in a food patch where ripe fruit are being consumed | 139 | 15.24 |
| GFIN | Foraging insects | Group is in a food patch where clumped insects (caterpillars, eggs, embedded invertebrates) are being consumed | 7 | 0.77 |
| GFOT | Foraging other | Group is in a food patch where other foods (seeds, pith, vertebrates, bromeliad leaves) are being consumed | 6 | 0.66 |
| GOTH | Other | Other behaviors, including intergroup interactions, predator mobbing | 2 | 0.22 |
| GRES | Resting | Inactive and not in contact with other monkeys | 91 | 9.98 |
| GSAC | Social active | Grooming or play behavior | 3 | 0.33 |

| | | | | |
|------|-------------------|---|-----|-------|
| GSAG | Social agonistic | Agonistic behaviors, including biting, chasing, threat displays, submissive gestures | 1 | 0.11 |
| GSRE | Social resting | Inactive and resting in contact with other monkeys | 106 | 11.62 |
| GSSS | Self-directed | Self-directed behaviors, grooming | 12 | 1.32 |
| GTRA | Traveling | Relatively fast-paced and direct group movement, without visual foraging | 18 | 1.97 |
| GVFO | Visually foraging | Gleaning insects from surfaces of leaves, bark, ground, branches typically while moving | 517 | 56.69 |
| GVIG | Vigilant | Alert scanning of environment beyond arm's reach | 7 | 0.77 |
