Suppl Table 1. Full regression results, including sensitivity analyses.....	p. 6-8

Supplemental Figure 1. Sampling Frame

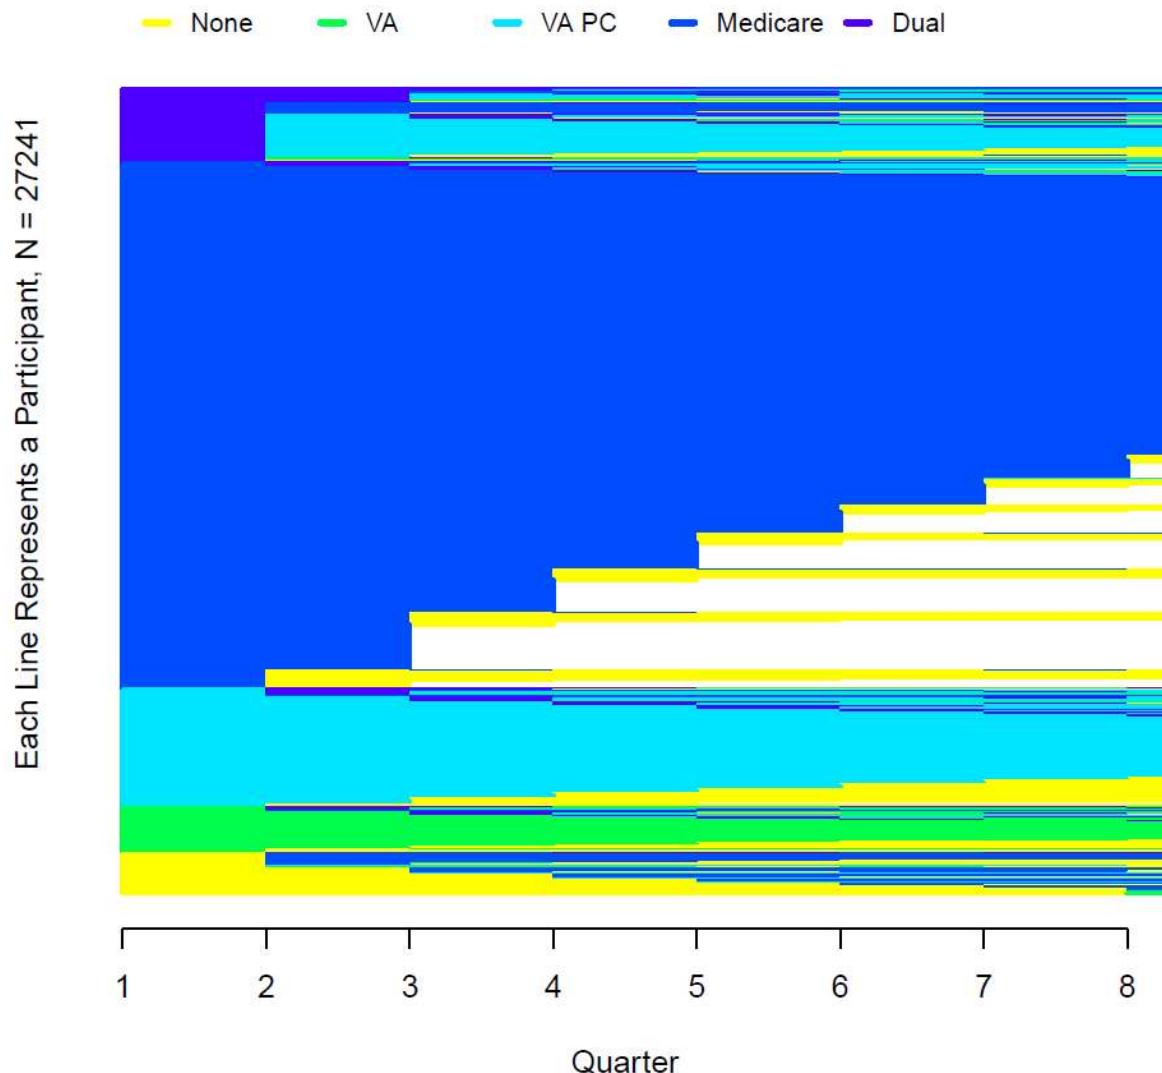

continued

Sampling Frame (continued)

Abbreviations: Veterans Health Administration (VHA), US Renal Data System (USRDS), end-stage renal disease (ESRD), calendar year (CY), Medicare Fee-for-Service (Medicare FFS), estimated glomerular filtration rate (eGFR)

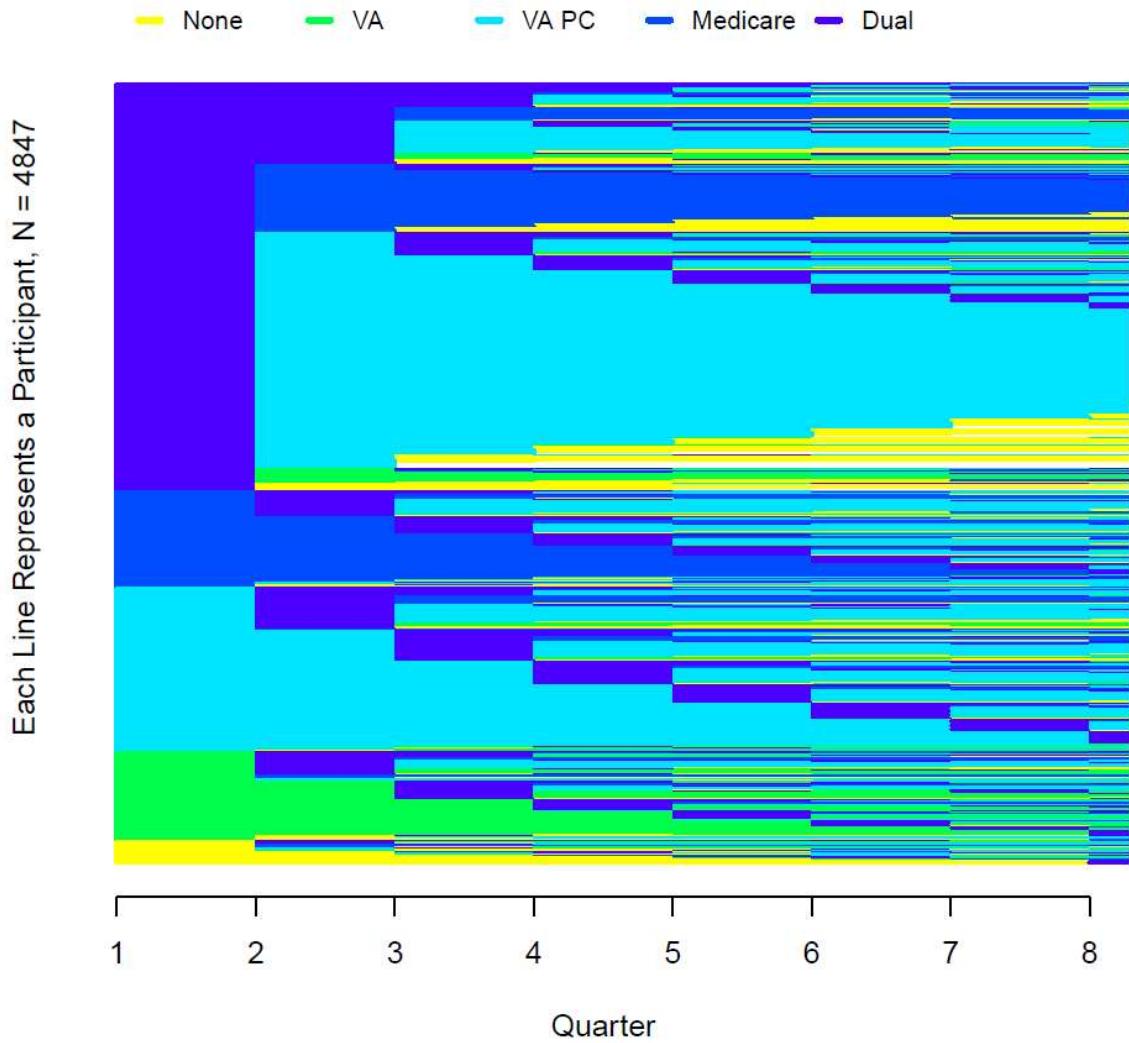

Supplemental Figure 2. Visualization of Veteran Dialysis Settings, by Quarter

Abbreviation: VA Purchased Care (VA-PC)

Note: This figure is illustrates the longitudinal pattern of dialysis setting for each Veteran in the study cohort, where each line represents a Veteran. Grouped together based on dialysis setting at initiation of maintenance dialysis, the lines describe general patterns of utilization over time as well as the extent of censoring (due to kidney transplantation or death). “None” dialysis setting refers to the absence of a VA, VA-PC or Medicare outpatient dialysis encounter/claim in the quarter, which may occur when patients are hospitalized.

Supplemental Figure 3. Visualization of Veteran Dual Dialysis Settings Sub-Cohort, by Quarter

Abbreviation: VA Purchased Care (VA-PC)

Note: This figure illustrates the longitudinal pattern of dialysis setting for the subsample of Veterans in the study cohort categorized as receiving dialysis in Dual settings over the 2 years of follow-up observation period, where each line represents a Veteran. Grouped together based on dialysis setting at initiation of maintenance dialysis, the lines describe general patterns of utilization over time as well as the extent of censoring (due to kidney transplantation or death). "None" dialysis setting refers to the absence of a VA, VA-PC or Medicare outpatient dialysis encounter/claim in the quarter, which may occur when patients are hospitalized.
