Supplementary information, fig. S11 Adenoviral expression of Cas9/sgRNAs targeting HBV cccDNA, related to fig. 7. (a) Schematic diagram of adenoviral vector with HBV-sgRNAs CRISPR/Cas9 expression. (b) 3D-HepLPCs-Hep infected with CAS9/HBV at a MOI of 0, 20, 40, 60 or 80 within 48 hours. GFP, green; Scale bars, 200 μ m. (c) GFP positive cells in 3D-HepLPCs-Hep infected with CAS9/HBV at a MOI of 60 were still observed at day 15. Scale bar, 200 μ m.
