

**Figure S1. Frequency of detected viral pathogens.**

We included 30 samples tested for six different viral pathogens. In twelve samples picornavirus was detected (PV, 36%), in two samples adenovirus (ADV, 6%), in two samples respiratory syncytial virus (RSV, 6%), and in one sample metapneumovirus (MPV, 3%). In 16 samples none of the six viral pathogens could be detected (no detection, 48%). Influenza A or B virus was not found.
