eTable. Patient and Injury Characteristics: Full Sample and Subsample With Complete Follow-up Survey Responses at 2 Weeks and 3 Months

This supplementary material has been provided by the authors to give readers additional information about their work.

In the eTable we report the summary statistics for the full set of subjects age ≥ 18 years with mTBI who were enrolled between February 26, 2014 and August 25, 2016 and compare them to the subsample who completed follow-up and answered the questions about educational materials and having seen a provider at 2 weeks and at 3 months, and finally the subsample that completed both sets of questions.
