

Data Sharing Statement

Jones. Effect of Levocarnitine vs Placebo as an Adjunctive Treatment for Septic Shock. *JAMA Netw Open*. Published December 21, 2018. 10.1001/jamanetworkopen.2018.6076

Data

Data available: Yes

Data types: Deidentified participant data

How to access data: Consistent with NIH policy, at the completion of the study award period and all ancillary analyses, data will be de-identified and locked. At that time requests for data sharing can be made to the PI with specific data needs, analysis plans and dissemination plans. Those requests will be reviewed by a study steering committee and the study sponsor for release. Contact: aejones@umc.edu

When available: With publication

Supporting Documents

Document types: Other (please specify)

Additional Information: Trial protocol included with submission documents

How to access documents: Documents provided during submission

When available: With publication

Additional Information

Who can access the data: Requests for data sharing can be made to the PI with specific data needs, analysis plans and dissemination plans. Those requests will be reviewed by a study steering committee and the study sponsor for release.

Types of analyses: For any proposed purpose approved by the study steering committee.

Mechanisms of data availability: After approval of a proposal

Any additional restrictions: All data will be deidentified and protected health information stripped. Dates will be time shifted to eliminate PHI, as needed.
