

SUPPLEMENTARY FIGURE 1

- A) AMP activates TcPFK with respect to ADP titrations (F16BP 10mM). 0mM AMP (solid triangles ▲ with solid line), 0.5mM AMP (open triangles △ with dotted line)
- B) AMP activates TbPFK with respect to ADP titrations (F16BP 10mM). 0mM AMP (solid squares ■ with solid line), 0.5mM AMP (open squares □ with dotted line)
- C) AMP activates LmPFK with respect to ADP titrations (F16BP 20mM). 0mM AMP (solid circles ● with solid line), 0.5mM AMP (open circles ○ with dotted line)

(n= 2, error bars are standard deviations, results for each enzyme normalised to highest specific activity without AMP present).

SUPPLEMENTARY FIGURE 2

- A) AMP activates TcPFK with respect to F16BP titrations (ADP 5mM). 0mM AMP (solid triangles ▲ with solid line), 0.5mM AMP (open triangles △ with dotted line)
- B) AMP activates TbPFK with respect to F16BP titrations (ADP 5mM). 0mM AMP (solid squares ■ with solid line), 0.5mM AMP (open squares □ with dotted line)
- C) AMP activates LmPFK with respect to F16BP titrations (ADP 10mM). 0mM AMP (solid circles ● with solid line), 0.5mM AMP (open circles ○ with dotted line)

(n= 2, error bars are standard deviations, results for each enzyme normalised to highest specific activity without AMP present).
