

SUPPLEMENTARY FIG. S8. Synthetic cannabinoid compounds reduce proliferation and kill colorectal cancer cells. Cell viability was assessed by cell counting of trypan blue-stained cells 48 h after treatment with selected cannabinoid compounds at a concentration of 10 μ M. Cell numbers for dead and total from one hemocytometer grid are shown. Error bars are SEM. Asterisks denote significant differences between treated and vehicle control cell numbers; * $p \leq 0.05$, ** $p \leq 0.01$, *** $p \leq 0.001$. SEM, standard error of the mean.
