

A comparison of prostate cancer bone metastases on ^{18}F -Sodium Fluoride and Prostate Specific Membrane Antigen (^{18}F -PSMA) PET/CT: Discordant uptake in the same lesion

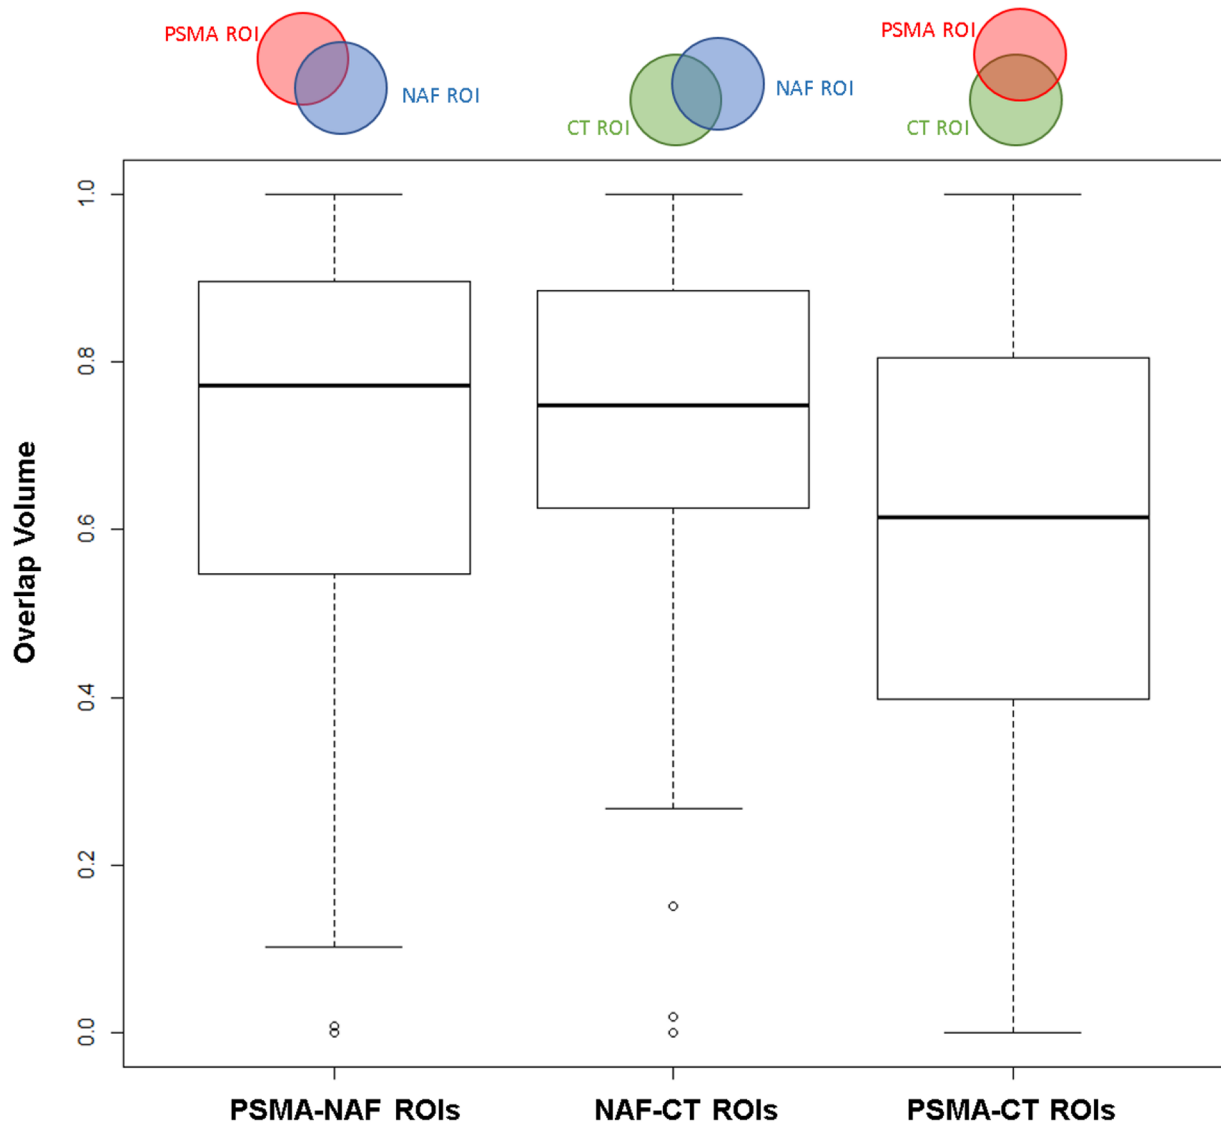

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: Density plot (histogram) of voxel-based CT values (HU) by imaging concordance for both ^{18}F -DCFBC cohort (N=54028 voxels) and ^{18}F -DCFPyL cohort (N=119978 voxels). Voxels contained exclusively within PSMA ROI (red) demonstrate lower HU (less sclerotic) compared to voxels contained within all ROIs (grey) or voxels exclusively contained within CT ROI (green). Similar to PSMA-exclusive regions, voxels contained exclusively in NaF ROIs were less sclerotic than regions overlapping with CT ROIs (blue).

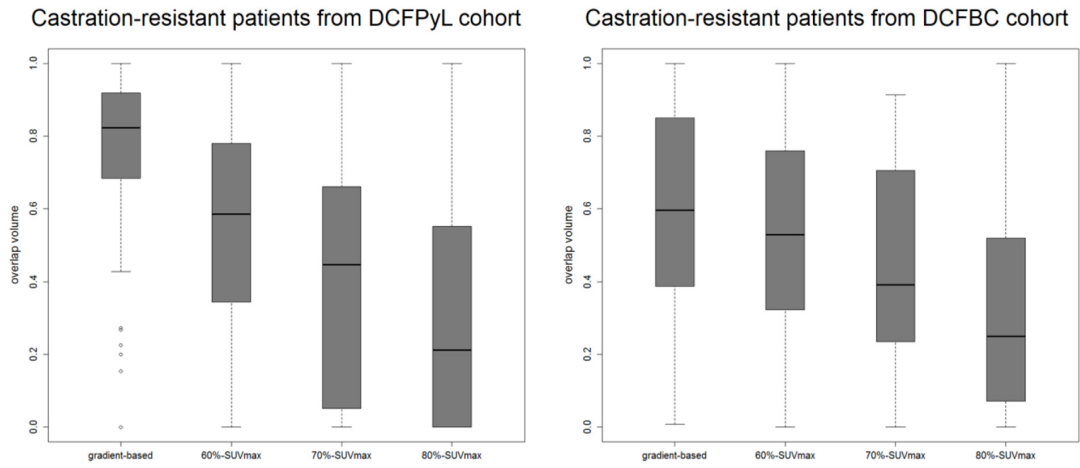

Supplementary Figure 2: Uptake discordance in lytic bone lesion of patient with newly diagnosed prostate cancer (Gleason Grade Group 5 adenocarcinoma with squamous differentiation present) and serum PSA 16 ng/mL. Patient demonstrated 16 metastases detected by both ^{18}F -NaF and ^{18}F -DCFPyL imaging, with 4 meeting study inclusion criteria, of which only one of which was lytic.

Supplementary Figure 3: Lesion-level Overlap Volume between PSMA-NaF, NaF-CT, and PSMA-CT ROI pairs. Overlap volume was significantly lower in PSMA-CT ROIs compared to PSMA-NaF ROIs (p=0.047).

Supplementary Figure 4: Patient-level heterogeneity in overlap volume between NaF and PSMA ROIs with patient disease status (CS = castrate-sensitive, CR = castrate-resistant) and number of lesions included in analysis along x-axis.

Supplementary Figure 5: Overlap Volume (OV) vs. segmentation level for castration-resistant patients in DCFPyL cohort (left) and DCFBC cohort (right) at various segmentation levels, demonstrating increased spatial discordance at higher levels of tracer activity.

Supplementary Table 1: Summary of patient demographics and treatment history, including number of co-detected bone lesions by NaF PET/CT and PSMA PET/CT and number of lesions meeting inclusion criteria

PSMA agent	PSA	Current therapy	Treatment History	Clinical Status	Number bone lesions detected by NaF and PSMA PET/CT	Number of lesions meeting inclusion criteria
¹⁸ F-DCFBC	4379	cabazitaxel, enzalutamide	RPx, RT, ADT, docetaxel, abiraterone	CRPC	19	12
¹⁸ F-DCFBC	0.59	enzalutimide	RT, bicalutimide, leuprolide, degarelix	CSPC	2	1
¹⁸ F-DCFBC	6.55	bicalutimid	bicalutimide, leuprolide, docetaxel, densoumab	CRPC	19	19
¹⁸ F-DCFBC	2.08	leuprolide, enzalutimide	RPx, RT, triptorelin, denosumab, degarelix, bicalutimide, vaccine	CRPC	9	5
¹⁸ F-DCFBC	812.3	goserelin, docetaxel, Cabozantinib	bicalutimide, degarelix, goserelin, provenge, abiraterone, docetaxel, Cabozantinib, denosumab	CRPC	17	9
¹⁸ F-DCFBC	388.1	leuprolide, abiraterone	RPx, enzalutimide, EBRT, Ra-223, leuprolide, provenge, TAK700	CRPC	15	9
¹⁸ F-DCFBC	0.27	goserelin	bicalutimide, goserelin, RT	CRPC	1	1
¹⁸ F-DCFPyL	93.3	leuprolide	casodex, leuprolide, docetaxel, RT, olaparib, enzalutimide	CRPC	>100	19
¹⁸ F-DCFPyL	>5000	leuprolide	RPx, RT, TAK700, Enzalutimide, Abiraterone, 223Ra, Avelumab, Docetaxel, Cabaitaxel	CRPC	>100	18

PSMA agent	PSA	Current therapy	Treatment History	Clinical Status	Number bone lesions detected by NaF and PSMA PET/CT	Number of lesions meeting inclusion criteria
¹⁸ F-DCFPyL	5.61	leuprolide, enzalutimide	leuprolide, docetaxel, casodex	CRPC	19	12
¹⁸ F-DCFPyL	1.73	leuprolide, enzalutimide	hyperthermic therapy, RT, brachytherapy, triptorelin, casodex, enzalutamide	CRPC	8	4
¹⁸ F-DCFPyL	16	untreated	new diagnosis	CSPC*	16	4
¹⁸ F-DCFPyL	11.79	none	brachytherapy	CSPC	1	1
¹⁸ F-DCFPyL	3.05	none	RPx, RT, ADT	CSPC	3	3
¹⁸ F-DCFPyL	2.61	none	RPx, RT, ADT	CSPC	1	1
¹⁸ F-DCFPyL	44.45	leuprolide	flutamide, nilutamide, vaccine, docetaxel, thaludomide, prednisone, bevacizumab	CRPC	10	3
¹⁸ F-DCFPyL	169.6	abiraterone	RPx, degarelix, docetaxel, bicalutimide, enzalutamide	CRPC	27	7
¹⁸ F-DCFPyL	134.5	cabazitaxel, carboplatin	RPx, RT, ADT, Provenge, Enzalutamide, Abiraterone, Docetaxel, Olaparib	CRPC	>100	20
¹⁸ F-DCFPyL	4.32	none	RT, brachytherapy, ADT	CSPC	8	1

RPx = radical prostatectomy, RT = radiation therapy, ADT = androgen deprivation therapy (specific therapeutic not specified), Patient marked with (*) indicating untreated de novo metastatic disease, included with CSPC patients for analysis

Supplementary Table 2: Spearman correlation of Overlap Volume (OV) with HU_{mean} , SUV_{max} , and volume within NaF and PSMA ROIs derived from gradient-based, 60%- SUV_{max} , 70%- SUV_{max} , and 80%- SUV_{max} segmentations. 95% confidence intervals provided in parentheses

ROI method	PSMA ROI			NaF ROI		
	HU_{mean}	SUV_{max}	volume	HU_{mean}	SUV_{max}	volume
gradient-based	0.31 (0.09, 0.48)	-0.03 (-0.25, 0.21)	0.20 (0.04, 0.30)	0.01 (-0.22, 0.23)	-0.23 (-0.05, 0.46)	0.29 (0.14, 0.43)
60%- SUV_{max}	0.31 (0.10, 0.50)	-0.24 (-0.44, 0.02)	0.01 (-0.24, 0.18)	-0.08 (-0.29, 0.13)	-0.05(-0.27, 0.18)	0.02 (-0.20, 0.18)
70%- SUV_{max}	0.33 (0.11, 0.51)	-0.29 (-0.47, -0.05)	0.06 (-0.25, 0.30)	-0.10 (-0.31, 0.09)	-0.09 (-0.28, 0.10)	0.02 (-0.24, 0.21)
80% SUV_{max}	0.36(0.14, 0.54)	-0.29 (-0.45, -0.08)	0.06 (-0.25, 0.27)	-0.10 (-0.28, 0.10)	-0.09 (-0.25, 0.07)	0.03 (-0.21, 0.21)

Supplementary Table 3: Spearman correlation of HU_{mean} and SUV_{max} within NaF and PSMA ROIs, derived from gradient-based, 60%- SUV_{max} , 70%- SUV_{max} , and 80%- SUV_{max} segmentations

ROI method	PSMA ROI	NaF ROI
gradient-based	0.06 (-0.26, 0.31)	0.19 (-0.2, 0.43)
60%- SUV_{max}	-0.09 (-0.36, 0.15)	0.23 (-0.14, 0.46)
70%- SUV_{max}	-0.13 (-0.40, 0.10)	0.20 (-0.15, 0.44)
80% SUV_{max}	-0.15 (-0.39, 0.06)	0.18 (-0.17, 0.43)

95% confidence intervals provided in parentheses.
