Explanation on Figure 3A

We did not modify the figure. We used a Western Blot System to obtain images. The original files were saved as 16 bit tif version. This kind of file can only be opened with specified Gel document software. We resaved the files with 24 bit tif version. The resaved files are attached.

File name: Fig3A-anti-Myc File name: Fig3A-anti-HA File name: Fig3A-anti-actin

The original files are attached. Selected regions are marked.

Explanation on Figure 3B

Yes, we modified this figure. The samples were loaded as T, empty well, S, empty well, M. To save space, we cut the empty wells and move the bands together.

We made a new figure without modification.

Figure without modification

File name: Fig3B-2

File name: Fig3B-anti-Myc

File name: Fig3B-anti-ATPase

File name: Fig3B-Rubisco

Explanation on Figure 5A

The figure is a cropped image, but no modification. We detected five transgenic lines on the same gel, three representative lines were showed.

File name: Fig5A-anti-Myc

File name: Fig5A-anti-HA

The cropped regions are marked.

File name: Fig5A-anti-actin

Explanation on Figure 5B

The figure is a cropped image, but no modification. We detected eight transgenic lines on the same gel, three representative lines were showed.

File name: Fig5B-anti-Myc

File name: Fig5B-anti-actin

File name: Fig5B-anti-HA

The cropped regions are marked.

Explanation on Figure 7

Both Figure A and B are cropped images, but no modification. We detected four ABAtreatment samples on the same gel, three representative samples were showed.
