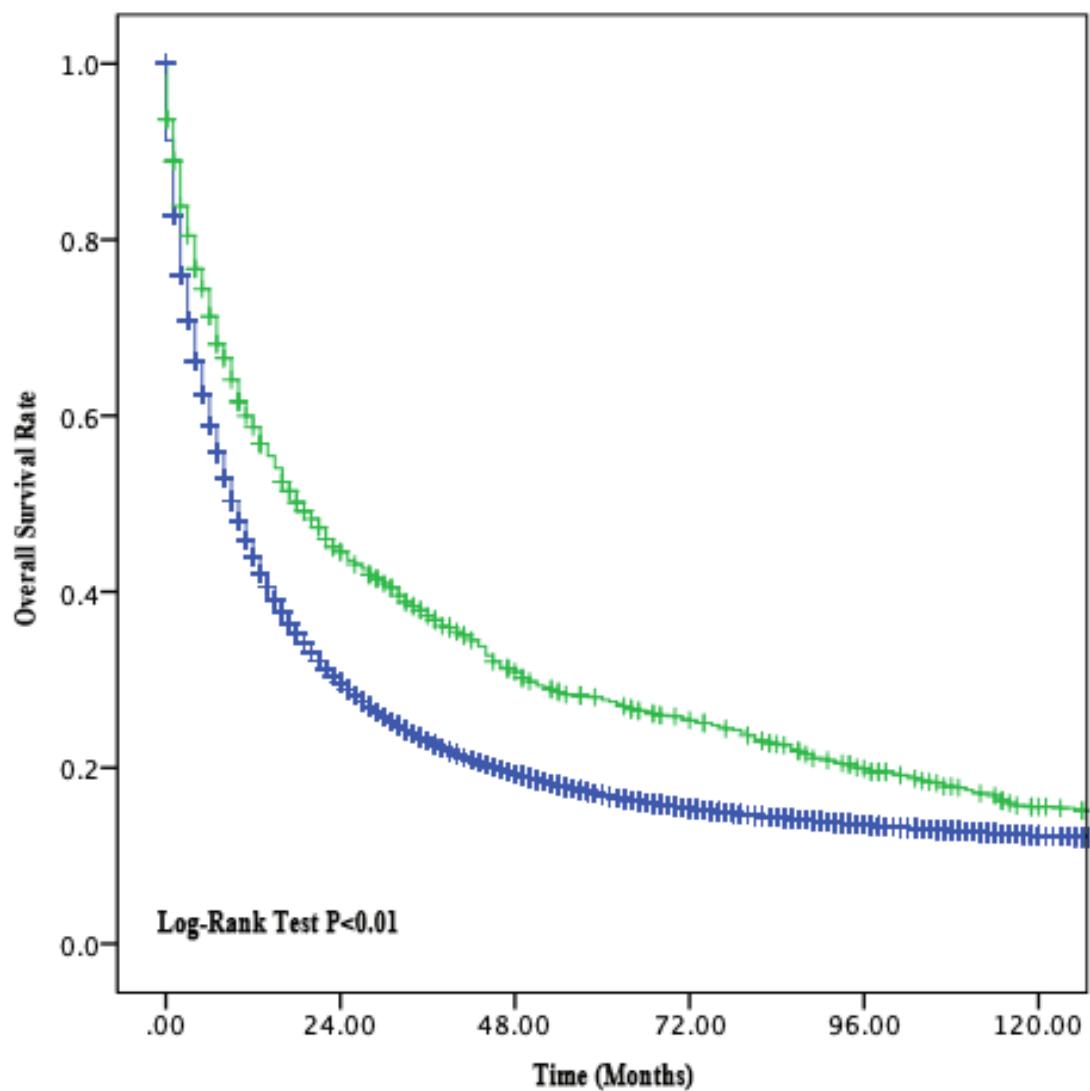

Figure S1 OS for CCAL patients and lung adenocarcinoma patients in unmatched cohort.

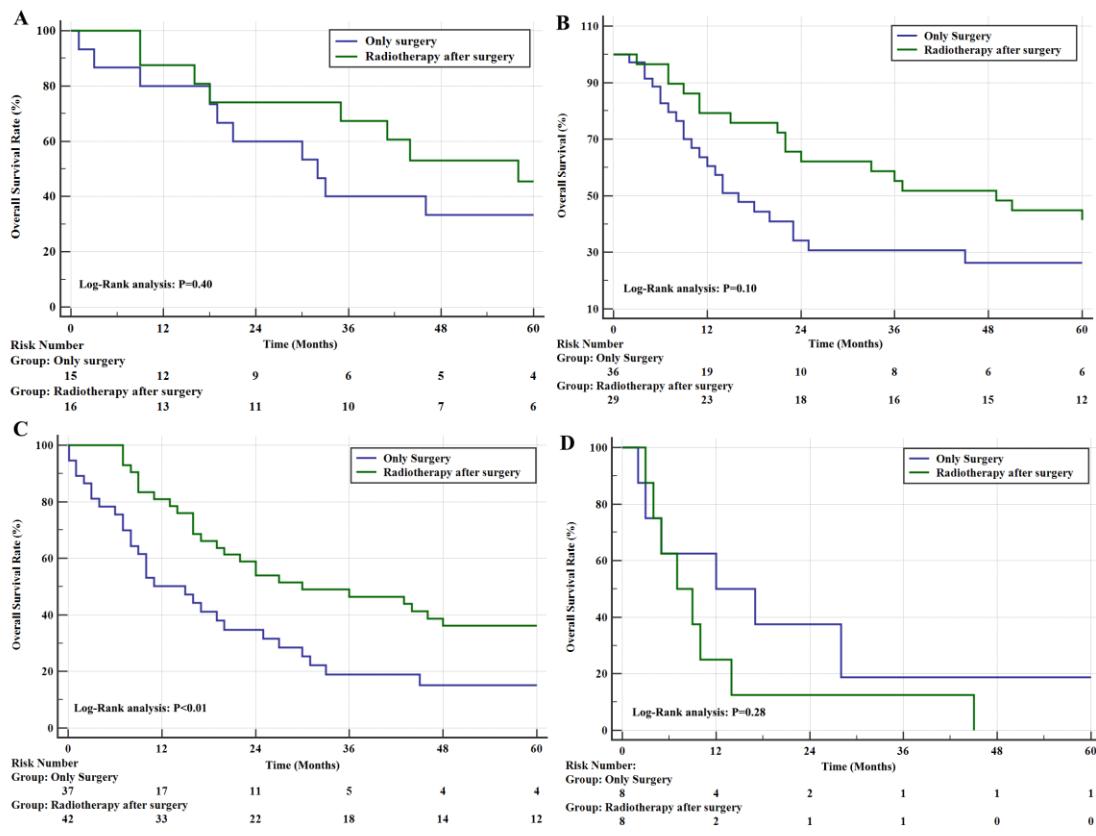

Figure S2 OS for CCAL patients with/without radiotherapy after surgery (A:I stage, B: II stage, C: III stage, D: IV stage).

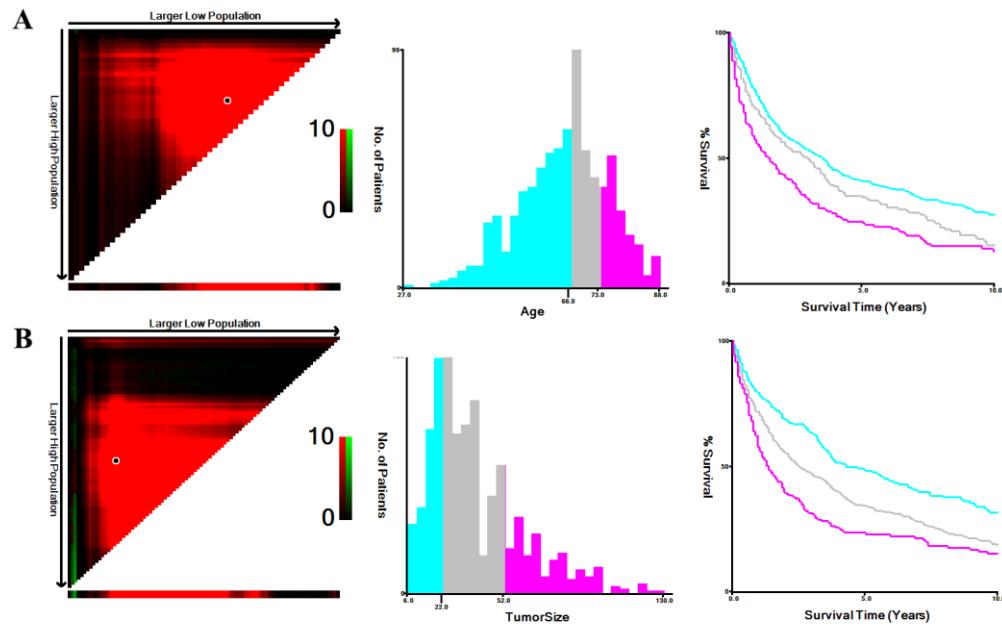

Figure S3 The optimal cut-off of Age (A) and tumor size (B) in CCAL patients using X-tile software. The optimal cut-point of Age and tumor size is shown on the histogram and corresponding population are presented on the Kaplan-Meier curve.

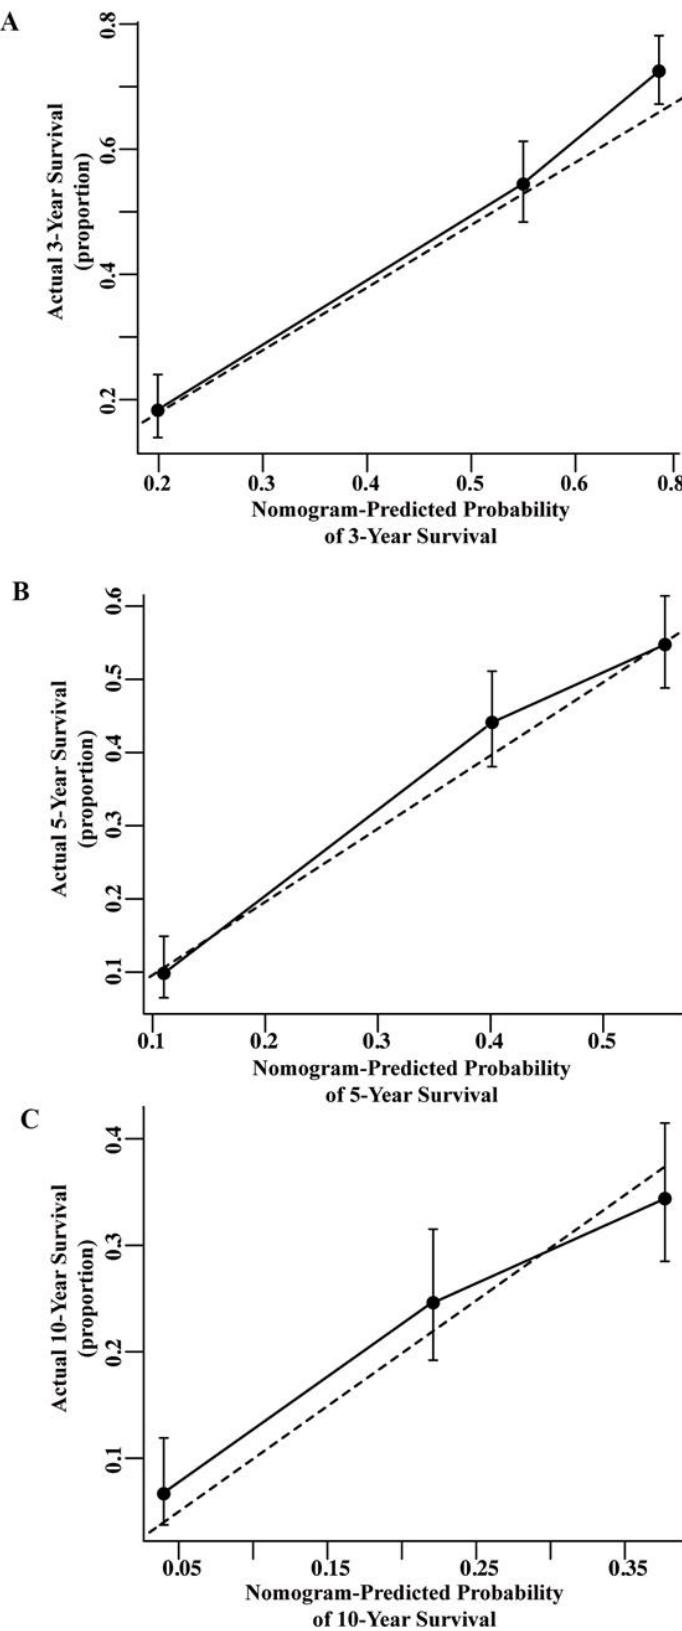

Figure S4 The calibration curve for predicting CCAL patients survival at (A) 3 years and (B) 5 years, and (C) 10 years in the primary cohort. Nomogram-predicted probability of overall survival is plotted on the X-axis, actual overall survival is plotted on the Y-axis.
